These release notes describe the new features and enhancements that are available in the ZCS 7.1.2 Network Edition release. Review the Known Issues section for a list of outstanding issues in this release before installing or upgrading.

The following sections are included in the release notes:

- **Major New Feature Enhancements for 7.1 on page 2**
- **Enhancements added in 7.1.2 on page 2**
- **System Updates for 7.0 and 7.1 on page 3**
- **Major Fixes in 7.1 Releases on page 3**
- **Major Issues Fixed for 7.1.2 on page 3**
- **Security Fixes for 7.1.1 on page 8**
- **Beta Features in ZCS 7.1 on page 8**
- **Future Changes to ZCS on page 9**
- **Upgrade Process on page 9**
- **After the Upgrade is complete on page 14**
- **Upgrade Instructions on page 11**
- **Status of Your Customizations to ZCS after Upgrade on page 16**
- **Known Issues on page 16**
- **Bug Reporting on page 18**

**Note:** If you are upgrading from 6.X, for a detailed description of the major enhancements made in ZCS 7, read the ZCS 7.0 release notes. Also review the User Interface Changes document. Both of these documents are on the Zimbra website, Support section, http://www.zimbra.com/support/documentation/zcs-ne-documentation.html
Major New Feature Enhancements for 7.1

ZCS 7.1 includes several new enhancements to improve localization support for APAC based customers and to implement the server side support for S/MIME and smartcard authentication technologies that will be available in a future release.

- Open ID Consumer Support (Bug 17147)
- Certificate authentication support (Bug 29625)
- Public Key lookup for S/MIME via External LDAP (Bug 50947)
- Public Key lookup for S/MIME via Contacts (Bug 53093)
- Store and lookup Public Key certificates for S/MIME in Zimbra GAL (Bug 55649)
- Phonetic contact fields (Bug 52823)

Enhancements added in 7.1.2

- Red Hat® Enterprise Linux®, AS/ES 6 (64-bit, mid-version) GA for 7.1.2. (Bug 46506)
- Two-way SSL authentication is supported on systems with reverse proxy enabled. (Bug 58152)
- Two set of localconfig keys where added, one for sInternalConnMgr and another for sExternalConnMgr. See page -14 for a list of keys that were deprecated and new keys that replaced them.
  If you have modified any of the deprecated keys from the default value, you need to re-apply the same changes to the corresponding new keys. (Bug 59707)
- The Socialcast account can now be configured using the Social Zimlet. (Bug 60813)
- A new admin view button has been added to the delegated admin view options. The Help Search View in the admin console can now be added to a delegated admin’s role. (Bug 61009)

Enhancements added in 7.1.1

- Users can now recover any items, including Briefcase files, contacts, appointments, that have been deleted or emptied from their Trash folders. Bug 51562
- When a message is dragged to the mini calendar to make a new appointment, a dialog displays asking if the sender and other recipients in the mail should be added to the appointment. (Bug 13096)
- ZCO. ZCO now supports single sign on when using Zimbra with an external Active Directory.
System Updates for 7.0 and 7.1

New Platforms (for Network Edition)

• Ubuntu 10.04 LTS (64-bit)
• Red Hat Enterprise Linux, AS/ES 6 (64-bit, mid-version)

Deprecated Platforms (for Network Edition)

• Red Hat Enterprise Linux 4 (32-bit) (64-bit)
• Red Hat Enterprise Linux 5 (32-bit)
• SUSE Linux Enterprise Server 10 (32-bit)
• Ubuntu 8.04 LTS (32-bit)

Note:  Deprecated platforms will EOL after ZCS 7.x

End-Of-Life Platforms (for Network Edition)

• Ubuntu 6.06 LT (32- and 64-bit)
• Mac OS X 10.4 Tiger (32-bit)

Note:  End-of-Life platforms are not available for ZCS 7.x and will not be available in the future.

Browser Support (Zimbra Web Client):

• Internet Explorer 6.0 is no longer supported in Advanced Web Client and only supported in Standard Web Client.

Major Fixes in 7.1 Releases

Major Issues Fixed for 7.1.2

<table>
<thead>
<tr>
<th>Issue Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>31323</td>
<td>The waitset API now works correctly when a mailbox is moved from one server to another. The wait set returns the WRONG_HOST_FOR_ACCOUNT error type when a mailbox is moved.</td>
</tr>
<tr>
<td>58404</td>
<td>HttpServletStream was not adhering to Servlet Spec 2.5 and throwing wrong IO Exception type, causing a HTTP500 error for any HTTP “HEAD” request. The Servlet API version was updated to adhere to Servlet Spec 2.5 and throw correct exception.</td>
</tr>
<tr>
<td>58794</td>
<td>ZCS documentation clarifies that each account enabled for archiving requires a Zimbra archive license and are counted against the number of Zimbra licenses purchased for archiving.</td>
</tr>
</tbody>
</table>
The list name field can now be edited when domain administrators create a DL in Google Chrome or Apple Safari.

Fixed the issue that caused Internet Explorer 8 and 9 to hang when the Google maps or Yahoo! Zimlets were opened.

ZCS now handles recurrence series update in a way compatible with Microsoft Exchange. When the organizer updates the time of a series, all the exception instances will be blown away. ZWC warns about this when the organizer is about to make the change.

Customers who prefer the old behavior, where updates to the series are applied without affecting exception instances, can set the account/COS attribute `zimbraCalendarKeepExceptionsOnSeriesTimeChange` to `TRUE` (default is `FALSE`).

Applying the Mysql51.pl script requires all Zimbra services except mysql.server to be stopped. See the MySQL table description on page -14.

In ZWC, the quota information now displays even when the quota is unlimited.

When using Chrome for ZWC, the issue that caused the new line to be added below the signature when composing a reply has been fixed.

Beginning with 7.1.2, Access and trace logs are now written to the `/opt/zimbra/log` directory.

There is a message indexing issue where the subject was mistakenly repeated during the index that results in incorrect search results when using quotes in a phrase query.

For an example of the issue, if the subject is One Two Three Four and the search query is “Four One”, the search results return the subject, One Two Three Four.

But a subject search for a phrase consisting of the last word of the subject followed by the first word should not match.

The issue has been fixed, but to fix the indexing after an upgrade you will need to reindex all messages.
## Major Issues Fixed for 7.1.2

To see a list of all the changes for this release, see the [Zimbra Product Portal](http://pm.zimbra.com/pm_release.php?rel=7.1&prod=zcs)

<table>
<thead>
<tr>
<th>Issue Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>24009</td>
<td>When accounts are deleted you can run <code>zmprov flushCache license</code> to update the license counter.</td>
</tr>
<tr>
<td>29902</td>
<td>Address Book photos up to 2MB (default limit) now sync to devices via mobile sync, and can be configured via the LC key <code>zimbra_activesync_contact_image_size</code>.</td>
</tr>
<tr>
<td>33506</td>
<td>Mobile. Fixed issues that caused charset and encoding problems when replying to a message from a mobile phone.</td>
</tr>
<tr>
<td>34350</td>
<td>UI change admin console. A new label, <strong>List Member</strong>, was created to search for a member of a distribution list from the admin console.</td>
</tr>
<tr>
<td>40308</td>
<td>Declined events now are displayed as grayed out in public shared calendars viewed using the standard ZWC.</td>
</tr>
<tr>
<td>40506</td>
<td>Fixed issues that caused CalDAV notifications to appear as sent “on behalf of” when there was an alias for the account.</td>
</tr>
<tr>
<td>53062</td>
<td>UI change. Account quota is now displayed as a bar under the name in ZWC.</td>
</tr>
<tr>
<td>53090</td>
<td>Contact information that includes custom fields, including “other phone” label, now sync correctly.</td>
</tr>
<tr>
<td>53206</td>
<td>Fixed the contact form to insert a space before the Postal Code so that the contact information displays correctly.</td>
</tr>
</tbody>
</table>
| 55289        | Worked around an Android issue where emails forwarded from Android devices cannot be viewed on Android devices when connecting to ZCS via mobile sync. Instead of forwarding a message as an RFC822 .eml attachment, inline forwarding with plain/text content is now used by default. For customers using Android 3.0 devices that support .eml attachments, they can set the LC config key `zimbra_mobile_smart_forward_rfc822_enabled` to `TRUE` (default is `FALSE`).  
  Note: Starting in ZCS 8.0, this will be controlled by the COS/acct level attribute `zimbraMobileSmartForwardRFC822Enabled` (default is `FALSE`). |
| 56982        | When customizing themes, the logo and login screen banners have changed beginning with ZCS 7.0. The login banner should be no larger than 300 x 48. The AppBanner logo should be not larger than 200 x 28. |
Before migrating accounts from the admin console, the CA certificate of the source computer must be migrated to the destination server.

To do this, use the UNIX scp command to securely transfer the certificate between the computers.

For example: moving a certificate for accounts migrating from Server_A to Server_B would be run as scp ca.pem from Server_A to Server_B

1. Copy the certificate, ca.pem on Server_A to the directory /tmp/. On Server-A type

   $ sudo cp /opt/zimbra/ssl/zimbra/ca/ca.pem /tmp/

2) Use scp to securely transfer the ca.pem certificate from Server_A to Server_B. On Server_B type

   $ scp Server_A:/tmp/ca.pem /tmp/

3. Import the ca.pem in the /tmp/ directory into Server_B’s keystore

   $ sudo /opt/zimbra/bin/zmcertmgr addcacert /tmp/ca.pem

4) Log in to the admin console from Server_B, and run the account migration wizard.

---

Contact information for birthday and anniversary are saved correctly in the Dutch (NL) version of ZWC.

UI Change. ZWC Help now includes additional links to the Zimbra Help Central Online and to the New Features document. Also there is an About link that displays the ZCS version that is running.

Issues that caused amavisd to not attach the HTML or text signature have been fixed.

ZCO. Fixed issues that caused GAL syncs to fail.

Starting from ZCS 7.0, ZCB uses mobile account limit and not MAPI account limit as in previous ZCS versions. Customers will need to make sure that they have at least 1 mobile license available for ZCB to function properly.

Task lists with a large number of tasks now displays correctly.

Administrator notification when there is change to Zimbra service status now works.
**Zimbra Collaboration Server 7.1.2 Network Edition Release Notes**

<table>
<thead>
<tr>
<th>Issue</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>58821</td>
<td>The SAML SSO extension files have been added to ZCS under <code>/opt/zimbra/extensions-network-extra/saml</code>. Also, the location of the TriCipher extension files has changed. The new location is <code>/opt/zimbra/extensions-network-extra/saml/myonelogin/README.txt</code> and <code>/opt/zimbra/extensions-network-extra/saml/myonelogin/tricipherextn.jar</code>.</td>
</tr>
</tbody>
</table>
| 59061 | Fixed an issue where a text attachment in a task or appointment, downloaded via the Connector for Outlook, is appended with junk characters when the Zimbra MIME parser is being used.  
Workaround for ZCS 7 releases prior to 7.1.1 is to revert to the JavaMail MIME parser:  
```bash  
$ zmlocalconfig -e javamail_zparser=false  
$ zmmailboxdctl restart  
``` |
| 59304 | If running a search after upgrading from pre-7.0 to ZCS 7 is not finding Chinese, Korean or Japanese words, you will need to reindex the content of the accounts after you upgrade. If reindex is not acceptable, you can set the COS/account attribute `zimbraTextAnalyzer` to "StandardAnalyzer" to keep using StandardAnalyzer instead of UniversalAnalyzer. |
| 59720 | To improve how fast filters run through messages, the value for `zimbraFilterSleepInterval` was changed to 1ms.  
Note: If the value is set to 0, the filtering will run faster, but only set this to 0 if the server has sufficient CPU power. |

**Major Issues Fixed for 7.1**

To see a list of all the changes for this release, see the Zimbra Product Portal, [http://pm.zimbra.com/pm_release.php?rel=7.1&prod=zs](http://pm.zimbra.com/pm_release.php?rel=7.1&prod=zs)

<table>
<thead>
<tr>
<th>Issue</th>
<th>Description</th>
</tr>
</thead>
</table>
| 56870 | Tuned InnoDB fsync parameters.  
The `innodb_max_dirty_pages_pct` was changed to 30% and the log file size (`innodb_log_file_size`) was changed from 100 MB to 500 MB.  
Old MySQL log files are being moved to `/opt/zimbra/data/tmp` and can be removed once the upgrade has been confirmed to be successful. |
| 57716 | Fixed issues that made Jetty time outs truncate GAL sync. |
Security Fixes for 7.1.1

• Upgrade to Postfix 2.7.4 to resolve memory corruption in Postfix SMTP server Cyrus SASL support (CVE-2011-1720).

• Resolved an issue when re-authenticating as another user after session expiration, content displayed from the previously authenticated account. (Bug 59846)

Beta Features in ZCS 7.1

The following features included with ZCS 7.1 are considered BETA quality. These feature should not be enabled in a production environment and are not supported.

• A new calendar view, Free/Busy View, can be enabled from the COS/Account Features tab. This view lets users set up a free busy schedule to track the free busy status of different people and resources in one place. (Bug 34827, 55904)

• zmmsgtrace replacement was added to 7.1.1. This is zmmsgtrace: version 1.05. Description follows.
This is considered a BETA for 7.1. (Bug 41078)

Future Changes to ZCS

This section documents major changes to future releases of ZCS.

- Extra and experimental Zimlets in `/opt/zimbra/zimlets-experimental` and `/opt/zimbra/zimlets-extra` will be removed from ZCS installation in the next major release of ZCS. Zimlets will be available from the Zimbra Gallery, [http://gallery.zimbra.com](http://gallery.zimbra.com). (Bug 52813)

- Zimbra Instant Messaging (IM) capabilities are going to be removed in the next major release of ZCS. These capabilities include the embedded IM server and the Zimbra IM Client (part of the Zimbra Web Client). Zimbra IM is marked BETA and should not be enabled in a production environment and is not a supported feature.

- Family Mailbox feature is not supported in ZCS 7.X and will be removed in the next major release of ZCS. We plan to provide a capability to enable multi-account support in ZWC as a replacement for the Family Mailbox feature.

Upgrade Process

To upgrade from 5.0.x or 6.0.x to 7.1.x, download the latest ZCS 7.1.x and run the upgrade.

Usage:
zmmsgtrace [options] [<mail-syslog-file>...]

--id|i "msgid" # case sensitive regex
--sender|s "user@domain" # case insensitive regex
--recipient|r "user@domain" # case insensitive regex
--srchost|F "hostname_or_ip" # case insensitive regex
--desthost|D "hostname_or_ip" # case insensitive regex
--time|t "start_ts,end_ts" # YYYYMMDD[HH][MM][SS]]]
--year "YYYY" # file year if no YYYY in file
--nosort # do not sort @ARGV files by mtime
--help # display a brief help message
--man # display the entire man page

Where:
<mail-syslog-file> defaults to "/var/log/zimbra.log"

Files ending in `.gz`, `.bz` or `.bz2` will be read using gzip or bunzip2.
Before you Upgrade

The following may need to be done before you upgrade.

Zimbra Database Integrity Check

Some customers have had corrupted databases prior to upgrade, and the upgrade has in some of those cases exacerbated the problem. In order to detect any corrupted databases as early as possible, we have added an optional step to check the MySQL database with zmdbintegrityreport prior to making any system changes. You are prompted to decide if you would like to run the zmdbintegrityreport.

The zmdbintegrityreport can take minutes to an hour to run, depending on your system size and disk bandwidth.

Note: The zmdbintegrityreport is run on a weekly basis from cron on all zimbra-store nodes. Large sites can opt to disable this by setting zmlocalconfig -e zmdbintegrityreport_disabled=TRUE. If you choose to disable this, it is recommended that the integrity reports be run by hand during the your normal maintenance windows and prior to running any ZCS upgrades.

Preparing your OS

Before you upgrade ZCS, Zimbra recommends that the operating system is updated with the latest patches that have been tested with ZCS.

Important: If your OS is SUSE Linux Enterprise Server 11, make sure you have SP1 installed. Zimbra supports only SLES11, SP1. (Bug 52031)

Verify Certificates Expiration Date

ZCS 7.1.x requires a valid self-signed or commercial SSL certificate for communication between some components. The self-signed certificates that are automatically created by the ZCS install have a default expiration of 365 days.

If you have an ZCS installation that is over one year old and are using self-signed certificates, your certificates will need to be updated either prior to the upgrade or immediately following the upgrade.

After you upgrade, the following commands run as the zimbra user will regenerate the self-signed SSL certificates:

- sudo zmcertmgr createca -new
- sudo zmcertmgr deployca
- sudo zmcertmgr deploycrt self -new
License Activation for 7.1

All network edition installs now require license activation. New installs will have a 10 day grace period from the license issue date before requiring activation. For upgrade installations, activation is automatic during the install with systems that have external access to the Zimbra license servers. A means of creating manual activations will be provided for systems that do not have external access to the Zimbra license servers. See the ZCS installation guides for more information.

When upgrading to ZCS 7.0.0 or later, the way in which ZCO and archiving licensing is enforced has changed in the server. Older licenses may have \texttt{MAPIConnectorAccountsLimit} set to 0 or \texttt{ArchivingAccountsLimit} missing in the license. Contact sales for an updated license file prior to upgrading if you have licensed either of these features and your current license does not properly reflect the correct number.

\textbf{Important:} Note that an upgrade installation will not proceed without automatic activation or a manually activated license file. Also, license activations are limited to three activations per license file. If you have previously used all three activations prior to upgrading your production system, you must contact sales to enable additional license activations.

Upgrade Instructions

Go to www.zimbra.com Network Edition Download page for the latest version of the software.

\begin{center}
\textbf{Important: Before you begin the upgrade, make sure you have a good backup for all users!}
\end{center}

When you run the install script, if ZCS is already installed, you will be asked if you want to upgrade. Follow the instructions in this release note to perform the upgrade. For additional information, refer to the installation guide.

Single-Server Upgrade Steps

Read the release notes before you begin.

You do not need to stop the services before upgrading. The upgrade process automatically stops and starts the services as required for the upgrade.

\textbf{Important:} Zimbra recommends that you run a command such as the UNIX command, \texttt{Immune to Hangups (nohup)}, so that the session does not terminate before the upgrade is completed. This is important when the upgrade includes restoring a configuration that has a large number of accounts.
1. Log in as root to the Zimbra server and `cd` to the directory where the Zimbra Collaboration Server Network Edition archive tar file is saved (cd / var/tmp). Type the following commands:

   `tar xzvf zcs.tgz`, to unpack the file
   `cd [zcsversionfullname]`, to change to the correct directory
   `./install.sh`, to begin the upgrade installation

   The upgrade script begins by checking for an existing installation and then checks for the Zimbra license. If the license is found, the number of current users and the number of user licenses is listed.

2. The Zimbra software agreement is displayed. Read this software license agreement and type `Y`.

3. The installer checks for prerequisites. If any are missing, the upgrade stops. The installer checks for a recent backup. If one is not found, **Do you wish to continue without a backup?** is displayed. The default is `N`. If you select N, you exit the upgrade. Run a backup and then restart the upgrade.

4. Next, **Do you want to verify message store database integrity (Y)** is displayed. The default is Yes. This step runs zmdbintegrityreport to verify that the MySQL database is not corrupt before upgrading to the latest ZCS.

   The zmdbintegrityreport can take minutes to an hour to run, depending on your system size and disk bandwidth. It is preferable that you run zmdbintegrityreport at the time of the ZCS upgrade. If you choose to skip this now, the zmdbintegrityreport will run during a regular scheduled interval after the upgrade is finished.

5. When **Do you wish to upgrade? [Y]** is displayed, press `Enter` to continue. The upgrade packages are unpacked.

6. The packages are listed. The installer also lists packages that are not installed. If you want to install the packages at this time, type `Y`; otherwise press `Enter`. The upgrade checks that there is enough space to perform the upgrade. If there is not enough space, the upgrade stops.

7. When **The system will be modified. Continue? [N]** is displayed, type `Y` and press `Enter`. The Zimbra server is stopped, and the older packages are removed. The upgrade process verifies which version of ZCS is being run and proceeds to upgrade the services, restores the existing configuration files, and restarts the server. If you have a configuration with a large number of accounts created, this can take a while.

8. If you have not set the time zone, you will be asked to set it. This sets the time zone in the default COS. The time zone that should be entered is the time zone that the majority of users in the COS will be located in.

9. When **Configuration complete – press return to exit** displays, press `Enter`. The upgrade is complete.
Multi-Server Environment Upgrade Steps

Before you begin, stop all the servers in your ZCS environment. To do this, on each server, as zimbra type zmcontrol stop.

**Important**: Upgrade the servers in the following order: LDAP server, MTA server, and then mail store server. The LDAP master server should be running as you upgrade the other servers.

1. Log in as root to the Zimbra server and cd to the directory where the Zimbra Collaboration Server upgrade archive tar file is saved (cd /var/tmp).
   Type the following commands:
   ```
   tar xzvf zcs.tgz, to unpack the file
   cd [zcsversionfullname], to change to the correct directory
   ./install.sh, to begin the upgrade installation
   ```
   The upgrade script begins by checking for an existing installation.

2. The Zimbra software agreement is displayed. Read this software license agreement and enter Y.

3. The installer checks for prerequisites. If any are missing, the upgrade stops.
   Mail store server - The installer checks for a recent backup. If one is not found, **Do you wish to continue without a backup?** is displayed. The default is **N**. If you select N, you exit the upgrade. Run a backup and then restart the upgrade.

4. When you upgrade the mail store server, the installer displays **Do you want to verify message store database integrity (Y)** is displayed. The default is **Yes**. This step runs zmdbintegrityreport to verify that the MySQL® database is not corrupt before upgrading to the latest ZCS.

   Running zmdbintegrityreport can take minutes to an hour to run, depending on your system size and disk bandwidth. It is preferable that you run zmdbintegrityreport at the time of the ZCS upgrade. If you choose to skip this now, the zmdbintegrityreport will run during a regular scheduled interval after the upgrade is finished.

   When the mySQL software versions are changed during upgrades, the underlying database tables need to be upgraded. The zmdbintegrityreport does this automatically during it’s first run and will report the changes. These are normal and should not cause alarm when upgrading.

5. When **Do you wish to upgrade? [Y]** is displayed, press Enter to continue.
   The upgrade packages are unpacked.

6. The packages you want to install on the server should be marked Y. All other packages should be marked N.
   The upgrade checks that there is enough space to perform the upgrade. If there is not enough space, the upgrade stops.
7. When **The system will be modified. Continue?** is displayed, type **Y** and press **Enter**. The server is stopped and the older packages are removed. The upgrade process verifies which version of ZCS is being run and proceeds to upgrade the services, restores the existing configuration files, and restarts the system. If you have a configuration with a large number of accounts created, this can take a while.

**Note:** When upgrading the zimbra mail store, the upgrade checks for the Zimbra license. If the license is found it lists the number of current users and the number of user licenses. If it is not found, press **Enter** to continue. You can add the license later from the administrator’s console.

8. When **Configuration complete – press return to exit** displays, press **Enter**. The upgrade is complete. Continue to upgrade each server.

**After the Upgrade is complete**

After you completed the upgrade to 7.1, the following bullet items may need to be addressed.

- MySQL table upgrade is required after upgrading to ZCS 7.0 or later. MySQL table upgrades are not automatically run during the upgrade to 7.0 based on time that it takes this process to run. There are no known performance impacts of running in production without doing this MySQL table upgrade. Customers can avoid these errors in the zmdbintegrityreport output by executing `/opt/zimbra/libexec/scripts/migrate20100913-Mysql51.pl` For a 4000 mailbox, 250 MB mailbox size, the script could take about 70 minutes to run. Customers should schedule their maintenance window accordingly. (Bug 24329, 50557)

Applying the Mysql51.pl script requires all Zimbra services except mysql.server to be stopped.

```
su - zimbra
zmcontrol stop
mysql.server start
/opt/zimbra/libexec/scripts/migrate20100913-Mysql51.pl
```

- If your self-signed SSL certificates have expired, update them. See **Verify Certificates Expiration Date** on page 10.
- If you have configured the following keys, you will need to replace them as described here.

The following keys are deprecated:

- `httpclient_client_connection_timeout`
- `httpclient_connmgr_connection_timeout`
- `httpclient_connmgr_idle_reaper_connection_timeout`
httpclient_connmgr_idle_reaper_sleep_interval
httpclient_connmgr_keepalive_connections
httpclient_connmgr_max_host_connections
httpclient_connmgr_max_total_connections
httpclient_connmgr_so_timeout
httpclient_connmgr_tcp_nodelay

and are replaced by the following keys:
httpclient_internal_client_connection_timeout
httpclient_internal_connmgr_connection_timeout
httpclient_internal_connmgr_idle_reaper_connection_timeout
httpclient_internal_connmgr_idle_reaper_sleep_interval
httpclient_internal_connmgr_keepalive_connections
httpclient_internal_connmgr_max_host_connections
httpclient_internal_connmgr_max_total_connections
httpclient_internal_connmgr_so_timeout
httpclient_internal_connmgr_tcp_nodelay
httpclient_external_client_connection_timeout
httpclient_external_connmgr_connection_timeout
httpclient_external_connmgr_idle_reaper_connection_timeout
httpclient_external_connmgr_idle_reaper_sleep_interval
httpclient_external_connmgr_keepalive_connections
httpclient_external_connmgr_max_host_connections
httpclient_external_connmgr_max_total_connections
httpclient_external_connmgr_so_timeout
httpclient_external_connmgr_tcp_nodelay

• If your pam configuration rules disallow null passwords, you will need to
define a password for the Zimbra UNIX account after the upgrade. This will
allow SSH key authentication for checking remote queues. (Bug 12807)

Upgrading new 7.0 Features

The following features can be enabled from the ZCS administration console,
COS or Account>Features tab:

• Ability to let users recover deleted items. Enable Dumpster folder (Bug
30582, 45284)
• Ability to send mail at a later time. Enable Mail send later. (Bug 7524,
51673)
Removing current version and performing a clean install for ZCS

If you do not want to upgrade, but prefer to install ZCS Network Edition as a new installation, when you run the ZCS Network Edition install script, enter N (no) when asked **Do you wish to upgrade?**

A warning displays asking if you want to delete all existing users and mail. If you enter **Yes**, all users, mail, and previous files are removed before proceeding with the new installation. Refer to the installation guides for installation instructions.

**Status of Your Customizations to ZCS after Upgrade**

Upgrading to the newest release does not delete your accounts or change your configuration.

Configuration settings stored in LDAP and localconfig are preserved during upgrades. Any files installed by ZCS may be deprecated and/or overwritten during upgrades, removing any customizations. This includes customized themes, logo branding changes, and crontab changes.

Zimlets that you customized and deployed are preserved during the upgrade. As upgrading of customized Zimlets can not be tested before the release, Zimbra recommends that you verify that your customized Zimlets work correctly after the upgrade.

All entries between the designated comments in the Zimbra crontab file are overwritten with new defaults upon upgrade. Customized backup schedules stored in the Zimbra crontab and customizations to the crontab entry outside the designated comments are preserved.

**Known Issues**

Zimbra engineering has identified a number of issues with the software, and we are actively working to resolve them. Following are the issues that are most likely to occur. All known bugs are listed in Zimbra’s Bugzilla database, available on the Zimbra web site, at [www.zimbra.com](http://www.zimbra.com).

<td><strong>51775</strong></td>
<td>ZCO with Outlook 2003. Work around - To add, modify or delete signatures using Outlook 2003, use Tools-&gt;Options-&gt;Mail Format tab and the associated Signatures button. (If you have configured Word to be your email editor, using the Tools-&gt;Options-&gt;Mail Format tab-&gt;&quot;Use Microsoft Word 2003...&quot; checkboxes, you will see a small drop-down arrow next to the Options button in the window you use to compose a new e-mail. This also allows you to edit signatures, but changes made here will not be synced to the server, and may be lost after restarting Outlook)</td>
</tr>
<tr>
<td><strong>48997</strong></td>
<td>Customers currently on ZCS 6.0.8 and using a non-default password change listener should make sure that the zimbraPasswordChangeListener attribute is set up correctly at the domain level, before upgrading to ZCS 7.1. To check the value of the attribute, run $ zmprov gd YOUR_DOMAIN zimbraPasswordChangeListener To change the value, say, to the samba password listener, run $ zmprov md YOUR_DOMAIN zimbraPasswordChangeListener sambapassword</td>
</tr>
<tr>
<td><strong>55174</strong></td>
<td>Calendar Week Numbers displayed in the mini-calendar are wrong when the Calendar preferences for Start week on is set to Monday.</td>
</tr>
<tr>
<td><strong>55459</strong></td>
<td>If the Short Cut Trainer Zimlet is enabled, when a message is deleted a script error is displayed. To avoid this, disable this Zimlet. This is not a supported Zimlet.</td>
