These release notes describe new features and enhancements that are available in the ZCS 8.0.9 Open Source release, and also include upgrade instructions. Review the Known Issues section for a list of outstanding issues in this release before installing or upgrading.

The following sections are included in the release notes:

- Major New Feature Enhancements for 8.0 on page 2
- General Enhancements by Bug Number on page 4
- Enhancements in 8.0.9 by Bug Number on page 4
- System Updates for 8.0 on page 10
- Major Issues Fixed for 8.0.9 on page 13
- Security Fixes on page 24
- Beta Features on page 25
- Changes to ZCS 8.0 on page 25
- Upgrade Process on page 26
- Before You Upgrade on page 26
- Upgrade Instructions on page 30
- After the Upgrade is Complete on page 33
- Remove Current Version and Perform Clean Install of ZCS on page 36
- Status of Your Customization to ZCS after Upgrade on page 36
- Known Issues on page 38
- Product Documentation on page 44
- Bug Reporting on page 44
- Revision History on page 44
Major New Feature Enhancements for 8.0

Zimbra Web Client Serenity User Experience

- **Streamlined User Interface.** The user interface has been completely redesigned with simplicity and ease of use being the key improvements. The Zimbra 8 interface is more streamlined so that common actions are easily discoverable and highly intuitive to use.

- **Conversation View.** In Zimbra 8 email is presented to users in a “natural” conversation view that makes reading and replying to messages convenient and intuitive. Quoted text is hidden and messages are laid out in a way that is easy for users to understand the “in-reply-to” relationship between different messages in the same email thread. Discreet links to Reply, Forward and More Actions (presented just below the email) let users respond to messages quickly and efficiently.

- **Rich Composition.** Improved composition editor allows users to craft rich text emails, with features such as paste-style support from desktop applications and the ability to include inline images bring the power of desktop word processors to email.

- **Shared Tagging.** In Zimbra 8 tagging functionality has been improved so that when items are shared users cannot only use tags to organize their data but also share these tags across applications as well as mailboxes.

Activity Stream

Activity Stream allows users extensive control over the messages that go to their Inbox. Activity Stream is intended for low priority mail that the user will get to at a later time. Users can easily set up activity stream filters that direct incoming messages to various folders (or are deleted from) based on different criteria that they can specify. For example, emails to distribution lists, feed and notifications that are not directly addressed to the user can be archived in folders that can be read when convenient.

“Graymail” filtering prevents user’s Inbox from being cluttered by legitimate but unwanted emails.

Dedicated Search Tab

A dedicated search tab is created whenever a user enters a new query in the header search box. This allows users to perform a search, navigate away from the search tab to perform another action such as compose an email, or schedule an event and then come back to the search tab to continue with the query.

Zimbra 8 provides users with a simple yet powerful search interface allowing users to perform simple actions such as quickly filter on common attributes or perform complex search queries making use of complex logical operators.
Enterprise Calendaring

Zimbra 8 provides an intuitive and sophisticated enterprise calendaring system that enables users to manage multiple calendars and provides support for advanced scheduling activities.

- **Experience improvements to time and resource suggestions.** Zimbra 8 has significantly improved the user’s experience when working with the appointment scheduling feature. Once users select attendees, Zimbra 8 can compare calendar availability and provide users with a list of suggested meeting times. Similarly, based on meeting requirements such as the size of the room and location, Zimbra’s scheduler can provide users with a list of conference facilities that fit meeting requirements.

- **Merge and split views of “Day” view** gives users the flexibility to view their different calendars (e.g. personal and work-related) either individually or overlaid on top of each other. (In other words, see a “merged” view of appointments from several different calendars in one calendar.)

- **Landscape and date range printing** provides users greater control over how calendars are printed.

- **Wizard to add external calendars** when users right-click to create new calendars. Zimbra 8 supports importing several popular calendar formats including Google and Yahoo! Calendars.

Automatic provisioning of accounts

- Accounts in Zimbra can be provisioned with attributes populated from Active Directory or another LDAP directory. Accounts can be provisioned ad hoc automatically polling for new accounts

- Dynamic distribution list support to automatically populate DL membership accounts based on account attributes

Compliance

- Litigation hold without forking the mailbox or needing to deploy additional infrastructure

- Custom folder retention and disposal policies can be enabled by IT or end user

- Administrative roles linked to Active Directory groups to enhance federated identity access and authorizations

Migration

- Multi-threaded for parallel mailbox migrations and improved scalability

- Stage and schedule migrations with improved visibility into real-time statistics and error-loggging

- Migrate out of office settings to reduce migration scheduling conflicts
Redesigned Administration Console

The ZCS administration console was redesigned to make administration of ZCS easier. It starts with a Home page that has links to common tasks. The Navigation pane now separates functions into the following sections:

- **Home.** The Home page has links to many of the common tasks. Also the Help Desk link is on this page.

- **Monitor.** Server Status to view the status for all installed servers and services and server statistics, message count and volume, anti-spam and anti-virus activity, mobile sync statistics, mail queues pages can be accessed.

- **Manage.** Accounts, aliases, distribution lists, and resources pages can be accessed.

- **Configure.** Class of Service (COS), domain, servers, Zimlets, administration console extensions, certificates, global settings, and voice/chat services pages can be accessed.

- **Tools and Migration.** Zimbra Utilities downloads page for the migration tools and Zimbra Connector for Outlook msi files, software updates, backup, and cross mailbox search pages can be accessed.

- **Searches.** You can create and save searches that you run frequently. A new Search page lets you create complex search queries.

General Enhancements by Bug Number

Enhancements in 8.0.9 by Bug Number

There are no new enhancements for 8.0.9

Enhancements in 8.0.8 by Bug Number

<table>
<thead>
<tr>
<th>Bug Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>85073</td>
<td>Source Port Logging For EU Legal Requirements. Added remote port to http(s) access logging.</td>
</tr>
<tr>
<td>86630</td>
<td>Added explanations to daily mail reports.</td>
</tr>
<tr>
<td>91779</td>
<td>Added RHEL7 64-bit support for 8.0.8 release and later.</td>
</tr>
<tr>
<td>92383</td>
<td>Added Ubuntu 14 LTS support.</td>
</tr>
</tbody>
</table>
## Enhancements in 8.0.7 by Bug Number

<table>
<thead>
<tr>
<th>Bug Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>71567</td>
<td>When a delegated user deletes a folder, a warning is given that this action will also delete the owner's copy.</td>
</tr>
<tr>
<td>85122</td>
<td>zmsoap supports JSON format from a file.</td>
</tr>
<tr>
<td>86190</td>
<td>Integrated latest version of the touch client.</td>
</tr>
<tr>
<td>86834</td>
<td>Log generated with EntryID for items that fail while fetching MAPI properties.</td>
</tr>
</tbody>
</table>

## Enhancements in 8.0.6 by Bug Number

<table>
<thead>
<tr>
<th>Bug Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>56494</td>
<td>Option available when sending a meeting invite to receive an email if the invite is forwarded to people not on the invitee list.</td>

<tr>
<td>75773</td>
<td>Zimbra user interface supports Safari 6 and Mac OS Lion 10.7.5.</td>
</tr>
<tr>
<td>83751</td>
<td>Enable Activity Stream commands are documented in the ZCS Administrator's Guide.</td>
</tr>
<tr>
<td>84019</td>
<td>If <code>zmfixperms</code> is run as the Zimbra user, it exits with an error stating “Error: must be run as root user”.</td>
</tr>
<tr>
<td>84156</td>
<td>When performing an upgrade, if <code>zmsetup.pl</code> does not find a value of <code>$prevVersion</code>, an error might take place and the installer gives a detailed error explanation.</td>
</tr>
<tr>
<td>84378</td>
<td>Upgrade instructions available for Zimbra Collaboration Appliance to Zimbra Collaboration Server.</td>
</tr>
</tbody>
</table>

## Enhancements in 8.0.5 by Bug Number

<table>
<thead>
<tr>
<th>Bug Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>72424, 72425, 72683</td>
<td>The search feature has been enhanced for better performance.</td>
</tr>
<tr>
<td>74526</td>
<td>Cronjob to clean <code>/opt/zimbra/data/amavisd/quarantine</code> has been added.</td>
</tr>
</tbody>
</table>
### Enhancements in 8.0.4 by Bug Number

<table>
<thead>
<tr>
<th>Bug Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>78322</td>
<td>Support for Windows 8 Mail using Zimbra Mobile Sync.</td>
</tr>
</tbody>
</table>
| 82664      | New local config (LC) keys to configure SMTP error limit and sleep time have been added and can be configured from the `zmlocalconfig` CLI.  
  - `smtpd_hard_error_limit`  
  - `smtpd_soft_error_limit`  
  - `smtpd_error_sleep_time`  
  Changes made to these LC key settings are carried over after upgrade. |

### Enhancements in 8.0.3 by Bug Number

<table>
<thead>
<tr>
<th>Bug Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>23487</td>
<td>Support for CentOS 6, 64-bit (Community ENTerprise Operating System).</td>
</tr>
<tr>
<td>43696</td>
<td>Support for Kernel-based Virtual Machine (KVM).</td>
</tr>
</tbody>
</table>

### Enhancements in 8.0 by Bug Number

<table>
<thead>
<tr>
<th>Bug Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1108</td>
<td>ZWC. Users can now sort from any column in the Content pane.</td>
</tr>
<tr>
<td>1810</td>
<td>ZWC. Up to 63 tags can be created.</td>
</tr>
</tbody>
</table>
### Dynamic distribution lists can be created.

- **Bug Number:** 3884, 61118
- **Description:** In conversation view, by default messages are now grouped by reference instead of by subject. When a message is replied to, it is added to a conversation thread if the reference in the header matches. If there is no reference ID in the header, the conversation is grouped by subject.

### Per folder message retention policy can be set.

- **Bug Number:** 6229
- **Description:** Users can right-click on a folder and in the Folder Properties dialog box set their retention policy.

### The ability to bind mailbox services to a specific bind address.

- **Bug Number:** 6380
- **Description:** You can set a maximum mailbox quota for a domain. The default for the domain mailbox quota is unlimited. The domain quota is the maximum amount of storage that can be used by all mailboxes within the domain.

### You can set a maximum mailbox quota for a domain.

- **Bug Number:** 7235
- **Description:** New users objects created in an external LDAP directory can automatically be provisioned as new mailboxes in ZCS. See Appendix B Auto-Provision New Accounts from External LDAP Directory.

### Zimbra supports DKIM signing for outgoing email.

- **Bug Number:** 11524
- **Description:** When archiving is installed, archiving can be configured from the administration console, Configure>Class of Service, Archiving page or account's Archiving page.

### Support for right-to-left languages in ZWC compose.

- **Bug Number:** 23191
- **Description:** Support for right-to-left languages in ZWC compose.

### Zimbra to Zimbra free/busy interop is supported.

- **Bug Number:** 26398
- **Description:** Zimbra to Zimbra free/busy interop is supported.

### Message deduping is enabled by default.

- **Bug Number:** 26645
- **Description:** Message deduping is enabled by default, with the COS/Account attribute `zimbraPrefMessageIdDedupingEnabled=TRUE`.

### ZWC. Calendars can be nested.

- **Bug Number:** 27211
- **Description:** ZWC. Calendars can be nested.

### ZWC. Users can enable the preference to include shared items when they do a search query.

- **Bug Number:** 27575
- **Description:** (Preferences>General, Searches section)
To enable SASL mechanisms with Postfix, you can do the following. This example uses GSSAPI as the SASL mechanism:

```
zmlocalconfig -e sasl_smtpd_mech_list="PLAIN LOGIN GSSAPI"
zmlocalconfig -e postfix_smtpd_sasl_security_options="noanonymous, noplaintext"
zmlocalconfig -e postfix_smtpd_sasl_tls_security_options=nonanonymous
```

Allow SASL auth on port 25:

```
zmprov ms MTAHOST.somewhere.com zimbraMtaTlsAuthOnly FALSE
```

---

<table>
<thead>
<tr>
<th>Bug Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>28648</td>
<td>To enable SASL mechanisms with Postfix, you can do the following. This example uses GSSAPI as the SASL mechanism:</td>
</tr>
<tr>
<td>39402</td>
<td>ZWC. Ability to access and mount external calendars via CalDAV.</td>
</tr>
<tr>
<td>46222</td>
<td>ZWC. Conversation view has been updated. Viewing from the reading pane, changes include • Inline Reply to individual messages in the conversation. • Selecting a conversation shows all messages in the conversation. • Forwarding a conversation, send the individual messages as attachments to the forwarded message. • Action footer per message. • Draft messages are saved as part of the conversation. Draft messages display with a dotted line around them.</td>
</tr>
<tr>
<td>46359</td>
<td>Contact Groups sync via CardDav.</td>
</tr>
<tr>
<td>47673</td>
<td>Users can now use the Find Shares folder to find all items that can be shared with them. Previously a users could find only items that were shared with them by distribution lists or from specific users.</td>
</tr>
<tr>
<td>53822</td>
<td>Multiple GAL sync accounts can be created for the same domain. Also see Bug 64123 on page 21.</td>
</tr>
<tr>
<td>53985</td>
<td>Searching for a contact now supports prefix matching for any terms in a multi-phrase query. For example, searching for Jon Smith will show results for Jonathan Smith as well.</td>
</tr>
<tr>
<td>56494</td>
<td>When an invitation is forwarded by an invitee, the originator receives a notification.</td>
</tr>
<tr>
<td>56827</td>
<td>System accounts cannot be deleted and are not displayed in the accounts list on the administration console. To see a list of system accounts go to Search&gt;Basic Attributes and select <strong>Search system accounts only</strong>.</td>
</tr>
<tr>
<td>58418</td>
<td>One step migration wizard has been removed from the administration console. Users can use the migration tools to run a migration. These tools are available from the administration console download page.</td>
</tr>
</tbody>
</table>
Administrator can click on any of the text labels in the administration console to see which Zimbra attribute is associated with the field.

In the standard client, new calendar printing options were added.

When an item is shared, the information is automatically published. Manual publishing of shared items is no longer required.

When using the New Account Wizard, you can search an external source directory and lists to select users to provision.

When a domain is renamed, the dynamic groups are correctly moved to the renamed domain.

External virtual accounts are created when users share Calendar or Briefcase items with an external user. A new defaultExternal COS has been added to Class of Service. The external virtual account is assigned to this COS. Administrators can manage these accounts from the administration console.

Additional auth options for zmmailbox and zmsoap CLIs. zmmailbox now supports sending requests to a mailbox using admin auth token.

End users can provision, manage and view distribution lists from their Address Book. If users have the ability to create distribution lists, the Address Book drop-down menu includes a Distribution List link.

To enable the ability to create and manage distribution lists for all users on a domain, type

```
zmprov grr domain <domainname.com> dom
<domainname.com> createDistList
```

To enable the ability to create and manage distribution lists for individual users on a domain, type

```
zmprov grr domain <domainname.com> usr
<user@domainname.com> createDistList
```
**System Updates for 8.0**

**Network Edition supported platforms**

Platform: 64-bit is supported; 32-bit is EOL

- Red Hat Enterprise Linux 7 (for 8.0.8 and later) - ACTIVE
- Red Hat Enterprise Linux 6 , patch level 4 or later is required - ACTIVE
- Red Hat Enterprise Linux 5 - EOL

---

**Bug Number** | **Description**
--- | ---
68505 | In ZCS 8.0, IPv6 is a beta release. IPv6 option can be configured during ZCS installation.

- The default is to use IPv4, unless IPv6 is configured.
- The expected way to change IP mode is by changing `zimbraIPMode` first, and then running `libexec/zmiptool` tool, e.g.:
  
  $ zmprov ms `zmhostname` zimbraIPMode ipv4 ; libexec/zmiptool ; zmcontrol restart
  
  $ ps aux | grep java | grep preferIPv4Stack | wc -l

  3

  $ zmprov ms `zmhostname` zimbraIPMode both ; libexec/zmiptool ; zmcontrol restart
  
  $ ps aux | grep java | grep preferIPv4Stack | wc -l

  0

68841 | Provide warning message when `-l` option is specified or if running the command on a non-mailbox server.

5210 | 11124 | Shared items can be tagged and the tags displays in the shared users' lists as well.

58160 | Users can set their account preferences to delegate authority to another user to send messages as if came from them (Send As) or send messages on behalf of the user. When a delegated user composes a message for the user, they select the user's name in the From address drop-down menu.

57547, 35967 | In the advanced client, added printing options to Calendar.

44384 | Ability to configure antispam settings to bypass messages originating from internal ZWC users.

73571 | Zimlets can now make GET, POST, PUT AND DELETE HTTP requests via the proxy.

74984 | `Djava.net.preferIPv4Stack=true` is added by default. It is removed if configured ZCS for use with IPv6 networks

75763 | `Djava.net.preferIPv6Addresses=true` is added if both IPv4 and IPv6 addresses are configured on the system
• Red Hat Enterprise Linux 4 - EOL
• CentOS Linux 7 (for 8.0.8 and later) - ACTIVE
• CentOS Linux 6, patch level 4 or later is required - ACTIVE
• Ubuntu 14.04 LTS Server Edition (for 8.0.8 and later) - ACTIVE
• Ubuntu 12.04.4 LTS Server Edition running the saucy (3.11) or later kernel is required. **Note:** If the original install was done with Ubuntu 12.04.2 or earlier, manual intervention is required to switch to the saucy (3.11) or later kernel series. See [https://wiki.ubuntu.com/Kernel/LTSEnablementStack](https://wiki.ubuntu.com/Kernel/LTSEnablementStack) for further information. - ACTIVE
• Ubuntu 10.04 LTS Server Edition - DEPRECATED
• Ubuntu 8.04 LTS - EOL
• SUSE Linux Enterprise Server 11, SP3 is recommended - ACTIVE
  • For 8.0.5 and later, SP3 is required.
  • For 8.0.4, SP2 is required.
• SUSE Linux Enterprise Server 10 - EOL

Open Source supported platforms

Operating Systems and Browsers supported with the Administration Console (Bug 71346)

■ Window 7 and Windows XP
  • Internet Explorer 9
  • Firefox 12
  • Safari 5.1.4
  • Chrome 19.0.1084.56 m

■ Mac "Leopard", "Snow Leopard"
  • Firefox 12
  • Safari 5.1.4
  • Chrome 19.0.1084.52

■ RHEL, Ubuntu, SUSE
  • Firefox - 3.6.17.
  • Chrome - 19.0.1084.52

Zimbra Web Client (Advanced)

■ Window XP SP3, Vista and Windows 7
  • IE 8.0 and higher (IE 8 for XP, 9+ for Vista/Win7)
  • Firefox (latest stable version)
  • Safari (latest stable version)
  • Chrome (latest stable version)

■ Mac OS X 10.5 "Leopard", 10.6 "Snow Leopard", 10.7 "Lion"
  • Firefox (latest stable version)
  • Safari (latest stable version)
  • Chrome (latest stable version)

■ Linux (RHAT, Ubuntu, Debian, Fedora, SUSE)
  • Firefox (latest stable version)
  • Chrome (latest stable version)

Zimbra Web Client (Standard)

■ Window XP SP3, Vista and Windows 7
• IE 7.0 and higher (IE 7,8 for XP, 9+ for Vista/Win7)
• Firefox (latest stable version)
• Safari (latest stable version)
• Chrome (latest stable version)

■ Mac OS X 10.5 "Leopard", 10.6 "Snow Leopard", 10.7 "Lion"
  • Firefox (latest stable version)
  • Safari (latest stable version)
  • Chrome (latest stable version)

■ Linux (RHAT, Ubuntu, Debian, Fedora, SUSE)
  • Firefox (latest stable version)
  • Chrome (latest stable version)

**Major Issues Fixed for 8.0**

This section contains information about major issues fixed in 8.0.x releases.

**Major Issues Fixed for 8.0.9**

This section contains information about major issues fixed in the 8.5.1 release.

---

**Admin - Utilities**

• 96084 - Logrotate Cron error after update to 8.0.8 is fixed.

**Install and Upgrade**

• 96008 - Upgraded to OpenSSL 1.0.1j. See [https://www.openssl.org/news/secadv_20141015.txt](https://www.openssl.org/news/secadv_20141015.txt) and Security Fixes for more information.
• 96113 - ZCS open source license update

**Security Fix**

• 96105 - Security Fix. For more information, see Security Fixes on page 24.

---

**Timezone Changes**

Updated Zimbra to be aware of the latest timezone information, in particular reflecting changes Russia has made to its existing time zones from October 26, 2014.

• 94725 - Updated timezones.ics to tzdata2014i.tar.gz
• 96145 - Rules for Europe/Moscow timezone do not reflect recent changes although our definition is based on updated information.
Major Issues Fixed for 8.0.8

Admin Console:
- 83298 - Improved admin console usability when returned results are over the limit.
- 83327 - GetEffectiveRightRequest in searchdirectory request loading improved.
- 93140 - Fixed issued causing ZCS 8.0.7 Patch 1 breaking delegated admin functionality.
- 93976 - Delegated admin ability to edit distribution list fixed.
- 93980 - Delegated admin ability to edit account fixed.
- 93984 - Delegated admin ability to edit resources fixed.

Backup and Restore:
- 87718 - Folders now accessible after a restore of users account.

Briefcase - Server:
- 79804 - Ability to edit Zimbra Document in Briefcase.
- 82236 - Share URL correct when selecting files in shared briefcase.

IMAP/POP Server:
- 93114 - Handling translation of IMAP metacharacters into regexes no longer causes high server load when IMAP LIST commands are issued.

Install and Upgrade:
- 83323 - Updated EULA.
- 89198 - MySQL version upgrade is performed prior to checking if upgrade is possible.
- 90796 - Fixed issue during replication and MMR mode configuration causing masters to go into endless loop.

Localization:
- 95291 - Fixed typo in ZsMsg_fr.properties results in the share access URL not being embedded in the email.

Mail - MTA/Spam/Virus:
- 88632 - zmmtactl restart is an option post 8.0.7 upgrade.

Mail - Server:
- 92610 - Fixed issue causing zmmbboxmove to exhaust LDAP connection pool during migrations.

Mail - Web Client:
- 43733 - Web client allows moving sub-folders within a shared folder.

Other - Server:
- 82587 - Fixed issue between Zimbra createTimeStamp attribute and Active Directory createTimeStamp values.
- 82192 - Mutually exclusive behavior displays for zimbraPublicSharingEnabled and zimbraExternalSharingEnabled.
Major Issues Fixed for 8.0.7

<tr>
<td>60880</td>
<td>Default hard coded time out for self-signed certificates is now set to five years (1825 days).</td>
</tr>
<tr>
<td>61088</td>
<td>The Zimbra Assistant feature is no longer available in the Zimbra Web Client</td>
</tr>
</tbody>
</table>
63722 When you upgrade to ZCS 8.0, the value for `zimbraPrefGalAutoCompleteEnabled` in the default COS is changed from FALSE to TRUE.

The value for `zimbraPrefGalAutoCompleteEnabled` in other cos's are not changed.

The default value of `zimbraPrefGalAutoCompleteEnabled` in newly created COS's will be TRUE.

64030 Now if dynamic lists are used, the default is to allow lists of up to 10,000 members. This can be controlled via the localconfig key `postfix_virtual_alias_expansion_limit`.

64123 During the initial installation of ZCS, a GAL sync account is automatically created for the default domain.

67237 Show selection checkbox for selecting email, contract, voicemail items in a list view is now disabled by default. Users will have to go to `Preferences>General` and select `Settings` to display checkboxes.

67880 If the zimbra-mta service is installed, Swatch will use it for delivering messages. If it is not installed, Swatch will attempt to use the system sendmail binary for delivering messages.

On multi-node servers that do not have zimbra-mta installed, it is necessary to ensure that there is a system sendmail binary that is correctly configured to deliver email if administrators expect swatch notifications to work.

68263 Created generic protocol throttle for POP3 and IMAP4 servers. The throttle will limit requests/second from a given IP and from a given account ID. The limit is enforced per-protocol; i.e. requests from POP and IMAP clients are handled separately.

The limits are configurable in LC, with the following keys and default values:

```
imap_throttle_ip_limit - default 250
imap_throttle_acct_limit - default 250
imap_throttle_command_limit - default 25
pop3_throttle_ip_limit - default 200
pop3_throttle_acct_limit - default 200
```

68749 When a domain is deleted, ZCS now deletes all its alias domains (i.e. alias domains with `zimbraDomainAliasTargetId` pointing to the domain being deleted.)

68849 On upgrade the ZCS installer automatically renames the existing admin extension `com_zimbra_smime` to `com_zimbra_smime_cert_admin` to avoid naming conflicts with the new `com_zimbra_smime` end user client Zimlet.

69494 Implement throttle for requests from an IP for LMTP service. By default, no throttling applied because the requests mostly come from internal MTAs.

To enable, throttling for LMTP service add the hostname/IP of MTA to `zimbraThrottleSafeHosts` and set the LC key `lmtp_throttle_ip_limit`.

<td>In 7.x and earlier releases, the server side logging controlled in log4j.properties was automatically scanned and reloaded even when the server is running. In 8.0 it is now necessary to invoke <code>zmprov rlog</code> from the command line in order to cause log4j.properties to be reloaded while server is running.</td>
</tr>
</tbody>
</table>
Index data for mailboxes is never deleted so a mailbox index can become very large over time and might be consuming excess disk space because of the large index data.

In 8.0, a new zmprov CLI, `compactIndexMailbox (cim)` was created to compact index data. This command can be used to reclaim disk space when the index volume starts to become full.

To compact a mailbox's index, type `zmprov cim <name@domain|id> start`.

Note: Depending on the size of the mailbox and the number of deletes this might take awhile. This might require additional free space on the index directory.

You can run this command concurrently. It is recommended to run this command during off peak hours. You cannot cancel the command once it is started.

To see the status of index compaction on a mailbox, type `zmprov getIndexStats <name@domain|id>`.

All non-default and non-certified Zimlets are disabled when upgrading to 8.0.

The com_zimbra_linkedin and com_zimbra_social zimlets will be undeployed and removed when you upgrade to ZCS 8.0. These zimlets are available from the Gallery at http://gallery.zimbra.com/.
Security Fixes

Zimbra Collaboration security fixes for 8.0.x releases include the following:

Security Fix for 8.0.9

- **Bug 96105:**
  - **CVE ID:** CVE-2014-8563
  - **CVSS base score:** 5.8 "Major" according to Zimbra Vulnerability Rating Classification: [http://community.zimbra.com/support/w/security_prgm/41843.zimbra-vulnerability-rating-classification](http://community.zimbra.com/support/w/security_prgm/41843.zimbra-vulnerability-rating-classification).
  - **Versions affected:** 8.0.0-8.0.8
  - **Important:** This issue is an important vulnerability only to those Zimbra installations that have not deployed the ZCS nginx proxy in front of mailboxd for POP/IMAP. nginx is not vulnerable to this issue - only jetty (mailboxd) received this fix.

- **Bug 96008:** Upgraded to OpenSSL 1.0.1j

Security Fix for 8.0.6

A critical security vulnerability has been resolved in this maintenance release. It is recommended for customers running all previous versions to upgrade as soon as possible. This issue is being tracked in our Bugzilla system as the following:

- **Bug 84547:** [http://bugzilla.zimbra.com/show_bug.cgi?id=84547](http://bugzilla.zimbra.com/show_bug.cgi?id=84547)
  - **Summary:** Critical Security Vulnerability
  - **Affected Version:** 7.2.5 and 8.0.5 and all previous releases

To protect customers as they plan to apply this update, this bug is marked as private in our system and technical details are not publicly available.

Security Fixes and Policy

ZCS release 8.0 includes other security fixes for current and previous maintenance releases.

Beta Features

The following features are released as Beta quality in ZCS 8.0 for customer use and evaluation.

Important! As with all Beta updates, these features should not be enabled in a production environment and are not supported.

- IPv6 support is beta for 8.0. When installing ZCS, the installation menu now includes the ability to configure zimbraIPMode to either IPv4 or IPv6. (Bug 72715)

- Outlook 2013 using EAS (Exchange ActiveSync). For more information, see Beta Quality Known Issues for 8.0 on page 38.

- Windows Mail app using EAS (Exchange Active Sync). For more information, see Beta Quality Known Issues for 8.0 on page 38.

Changes to ZCS 8.0

This section documents major changes to this release of ZCS.

- zimbra_posixaccount and zimbra_samba extensions are removed from ZCS installation. They will be available from the Zimbra Gallery, http://gallery.zimbra.com and be supported and maintained by the Zimbra Community. (Bug 72160)

- Zimbra Desktop will EOL in a future release of Zimbra but ZD 7.2 will be supported with Zimbra 8.0. The technology choices to provide offline access to Zimbra have expanded since the release of Zimbra Desktop 1.0.

- Extra and experimental Zimlets in /opt/zimbra/zimlets-experimental and opt/zimbra/zimlets-extra are removed from ZCS installation. The certified core Zimlets that ship with ZCS include the following.

<table>
<thead>
<tr>
<th>com_zimbra_phone</th>
<th>com_zimbra_url</th>
</tr>
</thead>
<tbody>
<tr>
<td>com_zimbra_email</td>
<td>com_zimbra_date</td>
</tr>
<tr>
<td>com_zimbra_ymemoticons</td>
<td>com_zimbra_dnd</td>
</tr>
<tr>
<td>com_zimbra_attachmail</td>
<td>com_zimbra_attachcontacts</td>
</tr>
<tr>
<td>com_zimbra_srchighlighter</td>
<td>com_zimbra_webex</td>
</tr>
</tbody>
</table>

Note: When you upgrade to ZCS 8, other Zimlets that you have enabled are disabled. (Bug 50123)

Zimlets will be available from the Zimbra Gallery, http://gallery.zimbra.com. (Bug 52813)

The Social and LinkedIn Zimlets were moved to the Zimbra Gallery to be supported and maintained by the Zimbra Community.

- ZCS no longer caches content when using the proxy servlet. The attribute, zimbraProxyCacheableContentType, is deprecated. (Bug74769)

- HTTPStoreManager is EOL in ZCS 8. ZCS 8.0 include a new StoreManager SDK for integrations with third party storage solutions.
Zimbra Instant Messaging (IM) capabilities was removed in ZCS 8.0.

Family Mailbox feature is removed in ZCS 8.0. See Known Issues, bug 77519 on page 40.

Zimbra Web Client UI Changes

- The default value to view the Mail tab content is Reading Pane on the right.
- Get Mail button is removed and refresh is now on the right end of the feature bar.
- The Print option is under the Actions menu.
- For advanced searches, click the magnifying glass in the Search field.
- People Search field was removed.
- Themes default has changed to Serenity.
- Briefcase is disabled by default.
- **Show selection checkbox** for selecting email, contract, voicemail items in a list view is now disabled by default.

Upgrade Process

To upgrade from 6.0.x or 7.0.x to 8.0.x, download the latest ZCS 8.0.x software and run the upgrade.

**Note:** *Database reloads are performed on 7.x to any 8.x upgrade.*

Before You Upgrade

The following might need to be done before you upgrade.

- **Zimbra Database Integrity Check** on page 26
- **Preparing Your OS** on page 28
- **Verify Certificates Expiration Date** on page 28
- **License Activation for ZCS 8.0** on page 35
- **Upgrading LDAP Replica Servers or Multi-Master Server from ZCS 8.0.0, 8.0.1, 8.0.2 to ZCS 8.0.4 and later** on page 29
- **Update Default Proxy SSL Ciphers Attribute** on page 29
- **Using Zimbra Clustering** on page 30

Zimbra Database Integrity Check

Some customers have had corrupted databases prior to upgrade, and the upgrade has in some of those cases exacerbated the problem. In order to detect any corrupted databases as early as possible, we have added an
optional step to check the MySQL database with `zmdbintegrityreport` prior to making any system changes. You are prompted to decide if you would like to run the `zmdbintegrityreport`.

The `zmdbintegrityreport` can take minutes to an hour to run, depending on your system size and disk bandwidth.

---

**Note:** The `zmdbintegrityreport` is run on a weekly basis from cron on all `zimbra-store` nodes. Large sites can opt to disable this by setting `zmlocalconfig -e zmdbintegrityreport_disabled=TRUE`. If you choose to disable this, it is recommended that the integrity reports be run by hand during your normal maintenance windows and prior to running any ZCS upgrades.
Preparing Your OS

Before you upgrade ZCS, Zimbra recommends that the operating system is updated with the latest patches that have been tested with ZCS.

Ubuntu OS

- Ubuntu 14.04 LTS Server Edition (for 8.0.8 and later)
- Ubuntu 12.04.4 LTS Server Edition running the saucy (3.11) or later kernel is required. Note: If the original install was done with Ubuntu 12.04.2 or earlier, manual intervention is required to switch to the saucy (3.11) or later kernel series. See https://wiki.ubuntu.com/Kernel/LTSEnablementStack for further information.

You can find your current kernel version by running `uname -a`. For example:

```
build@zre-ubuntu12-64:~$ uname -a
Linux zre-ubuntu12-64 3.11.0-17-generic #31~precise1-Ubuntu SMP Tue Feb 4 21:25:43 UTC 2014 x86_64 x86_64 x86_64 GNU/Linux
```

For more information, see:

- Bug 85308. For vCloud caveats, see comment #6.
- https://wiki.ubuntu.com/Kernel/LTSEnablementStack

Red Hat Enterprise Linux OS

Beginning with ZCS 8.0, only Red Hat Enterprise Linux 6 (64) is supported. If you are running an earlier version of RHEL, make sure you install this OS before upgrading to ZCS 8.0.

SLES 11 OS only

If your OS is SUSE Linux Enterprise Server 11, we recommend you have SP3 installed (SP3 is required for 8.0.5 and later). (Bug 83032, 83676)

Verify Certificates Expiration Date

ZCS 8.0.x requires a valid self-signed or commercial SSL certificate for communication between some components. The self-signed certificates that are automatically created by the ZCS install have a default expiration in ZCS 7.2 or earlier of 365 days, beginning with ZCS 8.0 default expiration is 1825 days (5 years).

If you have an ZCS installation that is over one year old and are using self-signed certificates, your certificates will need to be updated either prior to the upgrade or immediately following the upgrade.

After you upgrade, the following commands run as the zimbra user will regenerate the self-signed SSL certificates:

- `sudo zmcertmgr createca -new`
- `sudo zmcertmgr deployca`
- `sudo zmcertmgr deploycrt self -new`

**Upgrading LDAP Replica Servers or Multi-Master Server from ZCS 8.0.0, 8.0.1, 8.0.2 to ZCS 8.0.4 and later**

If you have replica servers or are in multi-master mode, you have to install the Zimbra LDAP schema specific to the release you are upgrading to onto the replica servers or onto the multi-master server before you upgrade to ZCS 8.0.4 and later. (Bug 81048)

1. On the master LDAP server, perform a software installation only of ZCS 8.0.4 or later.
   
   `./install.sh -s`

2. On each replica or additional master LDAP server in MMR mode, as zimbra user:
   a. Stop the server:
      
      `ldap stop`  
      or  
      `zmcontrol stop`

   b. Move the zimbra schema out of the way
      
      ```
      cd /opt/zimbra/data/ldap/config/cn=config/cn=schema  
      mv cn={4}zimbra.ldif /opt/zimbra/data/ldap/cn={4}zimbra.ldif.dead
      ```

   c. Copy the schema from the master LDAP server.
      
      ```
      scp root@<master>:/opt/zimbra/openldap/etc/openldap/schema/zimbra.ldif cn={4}zimbra.ldif
      ```

   d. Edit `cn={4}zimbra.ldif` to change the following two lines:
      
      ```
      dn: cn=zimbra,cn=schema,cn=config ------->     dn: cn={4}zimbra  
      cn: zimbra ------->     cn: {4}zimbra
      ```

   e. Start the server:
      
      `ldap start`  
      or  
      `zmcontrol start`

3. On the master LDAP server run:
   
   `/opt/zimbra/libexec/zmsetup.pl`

4. On each replica server run:
   
   `./install.sh`

To continue the upgrade, see [Multi-Server Environment Upgrade Steps](#) on page 31.

**Update Default Proxy SSL Ciphers Attribute**

Insecure SSL ciphers have been removed from the default proxy configuration. Existing sites are recommended to review their enabled ciphers

**Note:** Some clients might need to be reconfigured if they were previously using a cipher which is now disabled. (Bug 80133)

---

**Using Zimbra Clustering**

Zimbra Clustering is no longer available for ZCS 8.0. VMware provides integrated high availability between Zimbra and VMware HA for automated recovery of critical Zimbra application services and server components in the event of an application or infrastructure failure. Third party solutions such as network load balancers, storage mirroring, or OS clustering solutions like Red Hat Cluster Suite may be used in your deployment, but are not specifically tested or certified by VMware. (Bug75821)

---

**Upgrade Instructions**

Go to www.zimbra.com Open Source Edition Download page for the latest version of the software.

**Important:** Even though the upgrade process does not delete accounts on the mailbox server, you should back up the mailbox server before you begin the upgrade. After you upgrade, you should back up your server again.

When you run the install script, if ZCS is already installed, you will be asked if you want to upgrade. Follow the instructions in this release note to perform the upgrade. For additional information, refer to the installation guide.

**Important:** Zimbra recommends that an install or upgrade session be run with a UNIX command such as “screen” to help prevent an install or upgrade session from terminating before it is completed. This is important when the upgrade includes restoring a configuration that has a large number of accounts.

*Example command usage:* `screen ./install.sh`

**Note:** You cannot revert to a previous ZCS release after you upgrade.

---

**Single-Server Upgrade Steps**

Read the release notes before you begin.

You do not need to stop the services before upgrading. The upgrade process automatically stops and starts the services as required for the upgrade.

**Process**

1. Log in as `root` to the Zimbra server and `cd` to the directory where the ZCS Open Source Edition 8.0.9 archive tar file is saved (cd `/var/tmp`). Type the following commands:
tar xzvf zcs.tgz, to unpack the file

cd [zcsversionfullname], to change to the correct directory

./install.sh, to begin the upgrade installation

The upgrade script begins by checking for an existing installation.

2. The Zimbra software agreement is displayed. Read this software license agreement and type Y.

3. The installer checks for prerequisites. If any are missing, the upgrade stops. Next, Do you want to verify message store database integrity (Y) is displayed. The default is Yes. This step runs zmdbintegrityreport to verify that the MySQL database is not corrupt before upgrading to the latest ZCS.

The zmdbintegrityreport can take minutes to an hour to run, depending on your system size and disk bandwidth. It is preferable that you run zmdbintegrityreport at the time of the ZCS upgrade. If you choose to skip this now, the zmdbintegrityreport will run during a regular scheduled interval after the upgrade is finished.

4. When Do you wish to upgrade? [Y] is displayed, press Enter to continue. The upgrade packages are unpacked.

5. The packages are listed. The installer also lists packages that are not installed. If you want to install the packages at this time, type Y; otherwise press Enter. The upgrade checks that there is enough space to perform the upgrade. If there is not enough space, the upgrade stops.

6. When The system will be modified. Continue? [N] is displayed, type Y and press Enter. The Zimbra server is stopped, and the older packages are removed. The upgrade process verifies which version of ZCS is being run and proceeds to upgrade the services, restores the existing configuration files, and restarts the server. If you have a configuration with a large number of accounts created, this can take a while.

7. If you have not set the time zone, you will be asked to set it. This sets the time zone in the default COS. The time zone that should be entered is the time zone that the majority of users in the COS will be located in.

8. When Configuration complete – press return to exit displays, press Enter. The upgrade is complete.

Multi-Server Environment Upgrade Steps

Upgrade the servers in the following order. Update each server one at a time.

- LDAP master server. The LDAP master server must be running as you upgrade the other servers.
- LDAP replicas
- MTA servers
Proxy servers

Mail store servers

**IMPORTANT: Certificates.** If self-signed certificates are used, after the LDAP master is upgraded, the self-signed certificates must be redeployed on all remaining nodes **BEFORE** they are upgraded. If you do not do this, the upgrade will fail. Use CLI zmcertmgr to add the certificates. As root, type

```
/opt/zimbra/bin/zmcertmgr deploycrt self
```

**Process**

1. Log in as **root** to the Zimbra server and **cd** to the directory where the ZCS upgrade archive tar file is saved (cd /var/tmp). Type the following commands:

   - `tar xzvf zcs.tgz`, to unpack the file
   - `cd [zcsversionfullname]`, to change to the correct directory
   - `./install.sh`, to begin the upgrade installation

   The upgrade script begins by checking for an existing installation.

2. Three software license agreements are displayed. Read these license agreements and enter **Y** for each.

3. The installer checks for prerequisites. If any are missing, the upgrade stops.

4. When you upgrade the mail store server, the installer displays **Do you want to verify message store database integrity (Y)** is displayed. The default is **Yes**. This step runs zmdbintegrityreport to verify that the MySQL® database is not corrupt before upgrading to the latest ZCS.

   Running zmdbintegrityreport can take minutes to an hour to run, depending on your system size and disk bandwidth. It is preferable that you run zmdbintegrityreport at the time of the ZCS upgrade. If you choose to skip this now, the zmdbintegrityreport will run during a regular scheduled interval after the upgrade is finished.

   When the MySQL software versions are changed during upgrades, the underlying database tables need to be upgraded. The zmdbintegrityreport does this automatically during it's first run and will report the changes. These are normal and should not cause alarm when upgrading.

5. When **Do you wish to upgrade? [Y]** is displayed, press **Enter** to continue. The upgrade packages are unpacked.

6. The packages you want to install on the server should be marked **Y**. All other packages should be marked **N**.

   The upgrade checks that there is enough space to perform the upgrade. If there is not enough space, the upgrade stops.
7. When **The system will be modified. Continue?** is displayed, type *Y* and press *Enter*. The server is stopped and the older packages are removed. The upgrade process verifies which version of ZCS is being run and proceeds to upgrade the services, restores the existing configuration files, and restarts the system. If you have a configuration with a large number of accounts created, this can take a while.

8. When **Configuration complete – press return to exit** displays, press *Enter*. The upgrade is complete. Continue to upgrade each server.

---

**After the Upgrade is Complete**

*Important*: A known issue is the administration console might report a **CSFE_SVC_ERROR** with HTTP status code 503 when viewing the HSM or indexing sections. Users experiencing this frequently might add the administrator's web browser IP address to the DOS filter whitelist. See http://wiki.zimbra.com/wiki/DoSFilter for details on whitelist configuration. (Bug 82384)

After you completed the upgrade, the following might need to be addressed.

- During the upgrade process, zimbra might make a binary backup of existing databases when there are major structural changes occurring to the database format for ease of downgrading. Administrators will want to clean these up once they have confirmed a successful upgrade. For LDAP servers, these backups are in */opt/zimbra/data/ldap*, and in the form of `<dbname>.prev.$$` where $$ is the process ID of the upgrade script. (Bug 81167)
  
- You should run `zmldapupgrade -b 66387` after upgrading.

  Beginning with 8.0, **zimbraAllowFromAddress** attribute cannot be set for internal accounts or distribution lists. Running this script will change **zimbraAllowFromAddress** values to grants.

  This step was not included into the installer-driven upgrade due to potentially long delay for sites that set **zimbraAllowFromAddress** on many accounts.

  The migration command reports how many accounts had **zimbraAllowFromAddress** attribute set and how many of them needed migration. One way to verify all accounts got migrated is to run the command again. The total won't change, and the number migrated should be 0. (Bug 66387)

- If your self-signed SSL certificates have expired, update them. See **Verify Certificates Expiration Date** on page 28.

- If using zmlogger prior to ZCS 8.0.7, see **Cleanup Procedure for Logger Host** on page 34.

- If you have configured the following keys, you will need to replace them as described here. The following keys are deprecated:
  
  `httpclient_client_connection_timeout`
httpclient_connmgr_connection_timeout
httpclient_connmgr_idle_reaper_connection_timeout
httpclient_connmgr_idle_reaper_sleep_interval
httpclient_connmgr_keepalive_connections
httpclient_connmgr_max_host_connections
httpclient_connmgr_max_total_connections
httpclient_connmgr_so_timeout
httpclient_connmgr_tcp_nodelay

and are replaced by the following keys:

httpclient_internal_client_connection_timeout
httpclient_internal_connmgr_connection_timeout
httpclient_internal_connmgr_idle_reaper_connection_timeout
httpclient_internal_connmgr_idle_reaper_sleep_interval
httpclient_internal_connmgr_keepalive_connections
httpclient_internal_connmgr_max_host_connections
httpclient_internal_connmgr_max_total_connections
httpclient_internal_connmgr_so_timeout
httpclient_internal_connmgr_tcp_nodelay
httpclient_external_client_connection_timeout
httpclient_external_connmgr_connection_timeout
httpclient_external_connmgr_idle_reaper_connection_timeout
httpclient_external_connmgr_idle_reaper_sleep_interval
httpclient_external_connmgr_keepalive_connections
httpclient_external_connmgr_max_host_connections
httpclient_external_connmgr_max_total_connections
httpclient_external_connmgr_so_timeout
httpclient_external_connmgr_tcp_nodelay

**Cleanup Procedure for Logger Host**

When using zmlogger prior to ZCS 8.0.7, it is possible that numerous rdd files could be generated causing large amounts of disk space to be used. ZCS 8.0.7 contains a patch that prevents future additional growth of rdd files on the logger server. To clean up existing rdd files, use the following script to remove rdd files from your server. (Bug 85222)

**Cleanup Script**

```
sudo su - zimbra
zmloggerctl stop
cd logger/db/data
mkdir -p wrong_rrds
```
for nhostid in $(sqlite3 /opt/zimbra/logger/db/data/logger.sqlitedb 'select id from hosts'); do for ID in $(sqlite3 logger.sqlitedb "select rrd_file, col_name_19 from rrds Where csv_file == 'imap.csv' and host_id == $nhostid" | egrep __[0-9]+$ | cut -d'|' -f1 | sort -n | uniq); do mv rdds/${nhostid}-$ID.rrd /opt/zimbra/logger/db/data/wrong_rrds/; done ; done

for mon in {1..12}; do MON=$(LANG=en_US; date +%b -d 2013-${mon}-01); sqlite3 logger.sqlitedb "DELETE FROM rrds WHERE col_name_19 LIKE '$MON_%'"; done

sqlite3 logger.sqlitedb "VACUUM;"

zmloggerctl start

rm -R /opt/zimbra/logger/db/data/wrong_rrds
rm /opt/zimbra/logger/db/data/logger.sqlitedb.backup

### Updating your MySQL table

If you upgrading from 6.X to ZCS 8.0 or later, MySQL table upgrade is required after upgrading. If you do not upgrade MySQL, regular reports from zmdbintegrityreport are going to flag warnings in your MySQL table. Customers can avoid these errors in the zmdbintegrityreport output by executing `/opt/zimbra/libexec/scripts/migrate20100913-Mysql51.pl`. (Bug 24329, 50557)

MySQL upgrades are not automatically run during the upgrade to 8.0.x, because of the time that it takes this process to run. There is no known performance impact when running in production without doing this MySQL table upgrade.

Applying the Mysql51.pl script requires all Zimbra services except mysql.server to be stopped.

This script should be executed on all the mailstore servers where the mailboxd process is running. For a 4000 mailbox, 250 MB mailbox size, the script could take about 70 minutes to run. Customers should schedule their maintenance window accordingly.

To run the script:

1. Switch to zimbra user.
   
   su - zimbra

2. Stop mailboxd services to avoid email communications that might cause an interruption.
   
   zmmailboxdctl stop

3. Execute the perl script to upgrade the database tables.
   
   /opt/zimbra/libexec/scripts/migrate20100913-Mysql51.pl

4. Start the mailboxd service.
   
   zmmailboxdctl start
Setting iframes

Zimbra Web Client no longer works in an iframe. If you want to continue to use iframe, modify zimbra.web.xml.in. The parameter must be set to **TRUE**.

1. As zimbra user, change directories. Type
   
   `cd /opt/zimbra/jetty/etc`

2. Edit the file `zimbra.web.xml.in`

3. To use iframes, in the `<filter-name>Set Header Filter</filter-name> <filter-class>com.zimbra.webClient.filters.SetHeaderFilter</filter-class>` section, add the following
   
   `<init-param>`
   
   `<param-name>allowInFrame</param-name>`
   
   `<param-value>true</param-value>`
   
   `</init-param>`

4. Restart ZCS.
   
   `zmcontrol restart`

Remove Current Version and Perform Clean Install of ZCS

If you do not want to upgrade, but prefer to install ZCS Open Source Edition 8.0.9 as a new installation, when you run the ZCS install script, enter **N** (no) when asked **Do you wish to upgrade**?

A warning displays asking if you want to delete all existing users and mail. If you enter **Yes**, all users, mail, and previous files are removed before proceeding with the new installation. Refer to the installation guides for installation instructions.

Status of Your Customization to ZCS after Upgrade

Upgrading to the newest release does not delete your accounts or change your configuration.

Configuration settings stored in LDAP and localconfig are preserved during upgrades. Any files installed by ZCS might be deprecated and/or overwritten during upgrades, removing any customizations. This includes customized themes, logo branding changes, and crontab changes.

Only the core Zimlets are enabled after the upgrade. Zimlets that you customized and/or deployed are preserved during the upgrade but will be disabled. As upgrading of customized Zimlets cannot be tested before the release, Zimbra recommends that you verify that your customized Zimlets work correctly before re-enabling them for your end-users after the upgrade. The core Zimlet list is on page 25.
**Note:** When upgrading to ZCS 8.0.x from a previous major ZCS version, the upgrade step disables zimlets that are not the core zimlets for ZCS in all COSs. If you have enabled other zimlets at the account level, you might need to manually disable these zimlets. (Bug 77836)

All entries between the designated comments in the Zimbra crontab file are overwritten with new defaults upon upgrade.

**Changes to Customized Themes**

In ZCS 8.0, a new design for default skins was implemented. Custom skins created for Zimbra 7.x might not work as intended with Zimbra 8.x. Depending on what's in the skin, the issues might range from simple things such as colors being used in the wrong places to larger issues like functional components being hidden or placed in inaccessible areas of the screen. The proper fix for this is to take an existing 8.x skin, duplicate it, and update the skin to meet the same needs as the old skin. (Bug 62523)

**Using the Social Zimlet**

Configure the Social Zimlet in Facebook:

1. Go to the following in Facebook [https://developers.facebook.com/apps](https://developers.facebook.com/apps).
2. Click Create new App.
3. Set up the Zimlet similar to the following screenshot:
   - Enter a Display Name and Contact Email.
   - For App Domains, enter the client’s domain instead of localhost.
   - Disable Sandbox Mode to allow others to use.
4. Edit the file. Copy the App ID and App Secret from the created app to the file `com_zimbra_social/config_template.xml`, to the properties `social_facebook_app_id` and `social_facebook_app_secret`.
5. Build the app.

See the following screen shot.
Known Issues

Zimbra engineering has identified a number of issues with the software, and we are actively working to resolve them. Following are the issues that are most likely to occur, Beta Quality Known Issues for 8.0 and Known Issues for 8.0. All known bugs are listed in Zimbra’s Bugzilla database, available on the Zimbra web site, at www.zimbra.com.

Beta Quality Known Issues for 8.0

The following features are released as Beta quality in ZCS 8.0 for customer use and evaluation.

- Outlook 2013 using EAS (Exchange ActiveSync).
- Windows Mail App using EAS (Exchange ActiveSync).

As with all Beta updates, these features should not be enabled in a production environment and are not supported. Known issue details are listed below.

- **Outlook 2013 using EAS (Exchange ActiveSync).**

  Some known issues include:

  - 83727 - Contacts sub-folders and Global Address List do not sync when using an Outlook 2013 Exchange ActiveSync profile.
  - 83736 - Read receipt notifications are not received when enabled when using an Outlook 2013 Exchange ActiveSync profile.
  - 83747 - Categories and Tags are not displaying in the Zimbra Web Client when using Outlook 2013 Exchange ActiveSync.
  - 83750 - Appointment and tasks display in HTML body format in Outlook 2013 Exchange ActiveSync.
• 83790 - Contact notes do not display in the Zimbra Web Client when using Outlook 2013 Exchange ActiveSync.

• 83793 - Task reminders in the Zimbra Web Client do not sync when using Outlook 2013 Exchange ActiveSync.

• 83801 - Numerous known issues when using Outlook 2013 Exchange ActiveSync.

Windows Mail App using EAS (Exchange ActiveSync).

Some known issues include:

• Accept/decline buttons in the meeting request mail
• Cannot accept/decline a meeting from calendar
• Categories not supported
• Flags not supported
• Drafts do not sync
• Only the default folders in contacts and calendar are synced
• Sub-folder creation in not supported
• Sorting is always date-wise
• No action can be performed on existing folders

Known Issues for 8.0

</table>
| 75254 | Rolling Upgrades - Multinode configuration with self-signed certificates will not function in a rolling upgrade.  
If self-signed certificates are used, after the LDAP master is upgraded, the self-signed certificates must be redeployed on all remaining nodes before they are upgraded or the upgrade will fail.  
Workaround: Use commercial certificates with rolling upgrades. |
| 75280 | Won’t fix. When using the new quick reply feature to reply to a message, the original message is not added as an attachment, even if the user’s preferences are set to include the original message. This is the correct behavior. |
| 74941/75474 | Won’t fix. Users on a mailbox server at 7.2.x cannot send a message “on-behalf-of” or “send as” for a user that is on a server upgraded to 8.0.x.  
Make sure all users sending mail on behalf of (OBO) are on ZCS 8.0 |
| 75386 | Won’t fix. LinkedIn and Twitter Search Zimlets do not work for ZCS 8.0. |
| 75459/75527/72211/75459 | Rolling Upgrades. While in rolling upgrade mode, cross version sharing does not work. Users on ZCS 7.x cannot access shares on ZCS 8.0. |
| 75553 | Rolling Upgrade. While in rolling upgrade mode, cross mailbox search will not work for 7.2 or 8.0 versions from the admin console.  
Workaround: While in rolling upgrade mode, use the command line search across accounts.  
```
/opt/zimbra/bin/zmmboxsearch -m "*" -q "test"
``` |
| 75523 | Rolling Upgrade: Address Book. While in rolling upgrade mode, contact Group members are not displayed when users on a 7.2 mailbox server share their address book with users on an 8.0.x mailbox server. |
| 73209 | Rolling Upgrade. The **preauth failed** request does not lockout the account with lockout setting. This works correctly when the mailbox server is upgraded. |
| 74851 | Rolling Upgrade. You cannot move an account from a later version of ZCS to an earlier version. For example, an account on a server at ZCS 8.0 cannot be moved to a ZCS server at 7.2. |
| 74854 | Rolling Upgrade. If a calendar resource is renamed while you are performing a rolling upgrade make sure the rename requests are sent to the LDAP server that has been upgraded to 8.0.x. |
| 78321 | Rolling Upgrade. While in rolling upgrade mode, admins should deploy the drag and drop zimlet for 7.x users during a rolling upgrade, as this zimlet is no longer utilized in Zimbra 8.0.x as functionality has moved into core product code. |
| 78334 | Rolling Upgrade. In Zimbra 8.0.x checklists are defaulted to off. If the behavior for users in ZCS 7.2 was to have the check list feature enabled, admins will need to change the COS settings or users can modify their preferences to maintain the same behavior. |
| 78339 | Rolling Upgrade. Even if the emoticons zimlet was enabled for accounts at 7.2.x, after the rolling upgrade this zimlet is not available in the user’s Preferences page.  
Administrators should redeploy the zimlet. The zimlet zip file is in the /opt/zimbra/zimlets directory. |

</tbody>
</table>
The ability to completely disable SSL Renegotiation might be desirable for some environments, but due to the performance degradation it is not optimal to use as a default setting.

The SslSelectChannelConnector can be forced to disable client renegotiate requests via the "allowRenegotiate" attribute, for said connector, in jetty.xml.in/jetty.xml.

The default setting is allowRenegotiate=TRUE. Explicitly setting to "FALSE" will configure ZCS to always disallow SSL renegotiation for the SSL connector in question. A mailboxd restart is required for this change.

For instance:

```xml
<New id="ssl" class="org.eclipse.jetty.server.ssl.SslSelectChannelConnector">
  <Set name="Port">%%zimbraMailSSLPort%%</Set>
  <Set name="allowRenegotiate">FALSE</Set>
  <Set name="useDirectBuffers">%%zimbraMailUseDirectBuffers%%</Set>
  <Set name="maxIdleTime">30000</Set>
  <Set name="lowResourcesMaxIdleTime">10000</Set>
  <Set name="Acceptors">2</Set>
  <Set name="keystore"><SystemProperty name="jetty.home" default=".">/etc/keystore</Set>
  <Set name="password">@@mailboxd_keystore_password@@</Set>
  <Set name="KeyPassword">@@mailboxd_keystore_password@@</Set>
  <Set name="ExcludeCipherSuites">
    <Array type="java.lang.String">
      %%zimbraSSLExcludeCipherSuitesXML%%
    </Array>
  </Set>
  <Set name="Forwarded">true</Set>
</New>
```

When receiving an encrypted message with attachments, the Download, Briefcase and Remove links are not displayed, and the size of the attachment is not available.

Zimbra logger is not directly supported in mixed syslog (rsyslog, syslogd, sysklogd) environments due to formatting differences between the varying systems.
Release Notes and Upgrade Instructions

Product Documentation

Online help and ZCS documents are available on the administration console. Documentation can also be found on the Zimbra web site, and the Zimbra wiki has articles that the support team and the community have written in response to troubleshooting and administration issues.

Bug Reporting

If you encounter problems with this software, go to https://bugzilla.zimbra.com to submit a bug report. Make sure to provide enough detail so that the bug can be easily duplicated. Also, to discuss issues and this software in general, please visit our community forums at https://community.zimbra.com/collaboration.
