This release note describes new features and enhancements that are available in the ZCS 8.0.2 Open Source release. Review the Known Issues section for a list of outstanding issues in this release before installing or upgrading.

The following sections are included in the release notes:

- Major New Feature Enhancements for 8.0 on page 1
- General Enhancements by Bug Number on page 4
- System Updates for 8.0 on page 8
- Major Issues Fixed for 8.0.2 on page 10
- Security Fixes for 8.0 on page 14
- Beta Features in ZCS 8.0 on page 14
- Changes to ZCS 8.0 on page 14
- Upgrade Process on page 16
- Before You Upgrade on page 16
- Status of Your Customization to ZCS after Upgrade on page 22
- Known Issues on page 23
- Product Documentation on page 28
- Bug Reporting on page 28

Major New Feature Enhancements for 8.0

Zimbra Web Client Serenity User Experience

- Streamlined User Interface. The user interface has been completely redesigned with simplicity and accessibility being the key improvements. The Zimbra 8 interface is more streamlined so that common actions are easily discoverable and highly intuitive to use.

- Conversation View. In Zimbra 8 email is presented to users in a “natural” conversation view that makes reading and replying to messages convenient and intuitive. Quoted text is hidden and messages are laid out in a way that is easy for users to understand the “in-reply-to” relationship.
between different messages in the same email thread. Discreet links to Reply, Forward and More Actions (presented just below the email) let users respond to messages quickly and efficiently.

- **Rich Composition.** Improved composition editor allows users to craft rich text emails, with features such as paste-style support from desktop applications and the ability to include inline images bring the power of desktop word processors to email.

- **Shared Tagging.** In Zimbra 8 tagging functionality has been improved so that when items are shared users cannot only use tags to organize their data but also share these tags across applications as well as mailboxes.

**Activity Stream**

Activity Stream allows users extensive control over the messages that go to their Inbox. Users can easily set up activity stream filters that direct incoming messages to various folders (or are deleted from) based on different criteria that they can specify. For example, emails to distribution lists, feed and notifications that are not directly addressed to the user can be archived in folders that can be read when convenient.

“Graymail” filtering prevents user’s Inbox from being cluttered by legitimate but unwanted emails.

**Dedicated Search Tab**

A dedicated search tab is created whenever a user enters a new query in the header search box. This allows users to perform a search, navigate away from the search tab to perform another action such as compose an email, or schedule an event and then come back to the search tab to continue with the query.

Zimbra 8 provides users with a simple yet powerful search interface allowing users to perform simple actions such as quickly filter on common attributes or perform complex search queries making use of complex logical operators.

**Enterprise Calendaring**

Zimbra 8 provides an intuitive and sophisticated enterprise calendaring system that enables users to manage multiple calendars and provides support for advanced scheduling activities.

- **Experience improvements to time and resource suggestions.** Zimbra 8 has significantly improved the user’s experience when working with the appointment scheduling feature. Once users select attendees, Zimbra 8 can compare calendar availability and provide users with a list of suggested meeting times. Similarly, based on meeting requirements such as the size of the room and location, Zimbra’s scheduler can provide users with a list of conference facilities that fit meeting requirements.
Merge and split views of “Day” view gives users the flexibility to view their different calendars (e.g. personal and work-related) either individually or overlaid on top of each other. (In other words, see a “merged” view of appointments from several different calendars in one calendar.)

Landscape and date range printing provides users greater control over how calendars are printed.

Wizard to add external calendars when users right-click to create new calendars. Zimbra 8 supports importing several popular calendar formats including Google and Yahoo! Calendars.

(DL) Automatic provisioning of accounts

Accounts in Zimbra can be provisioned with attributes populated from Active Directory or another LDAP directory. Accounts can be provisioned ad hoc automatically polling for new accounts

Dynamic distribution list support to automatically populate DL membership accounts based on account attributes

Compliance

Litigation hold without forking the mailbox or needing to deploy additional infrastructure

Custom folder retention and disposal policies can be enabled by IT or end user

Administrative roles linked to Active Directory groups to enhance federated identity access and authorizations

Migration

Multi-threaded for parallel mailbox migrations and improved scalability

Stage and schedule migrations with improved visibility into real-time statistics and error-logging

Migrate out of office settings to reduce migration scheduling conflicts

Redesigned Administration Console

The ZCS administration console was redesigned to make administration of ZCS easier. It starts with a Home page that has links to common tasks. The Navigation pane now separates functions into the following sections:

Home. The Home page has links to many of the common tasks. Also the Help Desk link is on this page.

Monitor. Server Status to view the status for all installed servers and services and server statistics, message count and volume, anti-spam and anti-virus activity, mobile sync statistics, mail queues pages can be accessed
- **Manage.** Accounts, aliases, distribution lists, and resources pages can be accessed.

- **Configure.** Class of Service (COS), domain, servers, Zimlets, admin console extensions, certificates, global settings, and voice/chat services pages can be accessed.

- **Tools and Migration.** Zimbra Utilities downloads page for the migration tools and Zimbra Connector for Outlook msi files, software updates, backup, and cross mailbox search pages can be accessed.

- **Searches.** You can create and save searches that you run frequently. A new Search page lets you create complex search queries.

**General Enhancements by Bug Number**

<table>
<thead>
<tr>
<th>Bug Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1108</td>
<td>ZWC. Users can now sort from any column in the Content pane.</td>
</tr>
<tr>
<td>1810</td>
<td>ZWC. Up to 63 tags can be created.</td>
</tr>
<tr>
<td>3884, 61118</td>
<td>Dynamic distribution lists can be created.</td>
</tr>
<tr>
<td>5935</td>
<td>In conversation view, by default messages are now grouped by reference instead of by subject. When a message is replied to, it is added to a conversation thread if the reference in the header matches. If there is no reference ID in the header, the conversation is grouped by subject.</td>
</tr>
<tr>
<td>6229</td>
<td>Per folder message retention policy can be set. Users can right-click on a folder and in the Folder Properties dialog box set their retention policy. The admin can set new retention policies from the admin console. Users can select the retention policy or create their own.</td>
</tr>
<tr>
<td>6111</td>
<td>The ability to bind mailbox services to a specific bind address. As part of this enhancement, the following attributes are added to server configuration. When these are set, the specific services bind to these specific addresses. If these are not set, the services bind to all interfaces.</td>
</tr>
<tr>
<td></td>
<td><strong>zimbraMailBindAddress</strong></td>
</tr>
<tr>
<td></td>
<td><strong>zimbraMailSSLBindAddress</strong></td>
</tr>
<tr>
<td></td>
<td><strong>zimbraMailSSLClientCertBindAddress</strong></td>
</tr>
<tr>
<td></td>
<td><strong>zimbraAdminBindAddress</strong></td>
</tr>
<tr>
<td>6380</td>
<td>You can set a maximum mailbox quota for a domain. The default for the domain mailbox quota is unlimited. The domain quota is the maximum amount of storage that can be used by all mailboxes within the domain.</td>
</tr>
<tr>
<td>7235</td>
<td>New users objects created in an external LDAP directory can automatically be provisioned as new mailboxes in ZCS. See Appendix B Auto-Provision New Accounts from External LDAP Directory</td>
</tr>
<tr>
<td>Bug Number</td>
<td>Description</td>
</tr>
<tr>
<td>------------</td>
<td>-------------</td>
</tr>
<tr>
<td>11524</td>
<td>Zimbra supports DKIM signing for outgoing email.</td>
</tr>
<tr>
<td>18815</td>
<td>When archiving is installed, archiving can be configured from the administration console, Configure&gt;Class of Service, Archiving page or account’s Archiving page.</td>
</tr>
<tr>
<td>23191</td>
<td>Support for right-to-left languages in ZWC compose.</td>
</tr>
<tr>
<td>26398</td>
<td>Zimbra to Zimbra free/busy interop is supported.</td>
</tr>
<tr>
<td>26645</td>
<td>Message deduping is enabled by default, with the COS/Account attribute <code>zimbraPrefMessageIdDedupingEnabled=TRUE</code>.</td>
</tr>
<tr>
<td>27211</td>
<td>ZWC. Calendars can be nested.</td>
</tr>
<tr>
<td>27575</td>
<td>ZWC. Users can enable the preference to include shared items when they do a search query. (Preferences&gt;General, Searches section)</td>
</tr>
</tbody>
</table>
| 28648      | To enable SASL mechanisms with Postfix, you can do the following. This example uses GSSAPI as the SASL mechanism:  
zmlocalconfig -e sasl_smtpd_mech_list="PLAIN LOGIN GSSAPI"  
zmlocalconfig -c postfix_smtpd_sasl_security_options="noanonymous, noplain text"  
zmlocalconfig -c postfix_smtpd_sasl_tls_security_options=nonanonymous  
Allow SASL auth on port 25:  
zmprov ms MTAHOST.somewhere.com zimbraMtaTlsAuthOnly FALSE |
| 39402      | ZWC. Ability to access and mount external calendars via CalDAV. |
| 46222      | ZWC. Conversation view has been updated. Viewing from the reading pane, changes include  
• Inline Reply to individual messages in the conversation.  
• Selecting a conversation shows all messages in the conversation.  
• Forwarding a conversation, send the individual messages as attachments to the forwarded message.  
• Action footer per message.  
• Draft messages are saved as part of the conversation. Draft messages display with a dotted line around them. |
<p>| 46359      | Contact Groups sync via CardDav. |
| 47673      | Users can now use the Find Shares folder to find all items that can be shared with them. Previously a user could find only items that were shared with them by distribution lists or from specific users. |
| 53822      | Multiple GAL sync accounts can be created for the same domain. Also see Bug 64123 on page 12. |</p>
<table>
<thead>
<tr>
<th>Bug Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>53985</td>
<td>Searching for a contact now supports prefix matching for any terms in a multi-phrase query. For example, searching for Jon Smith will show results for Jonathan Smith as well.</td>
</tr>
<tr>
<td>56494</td>
<td>When an invitation is forwarded by an invitee, the originator receives a notification.</td>
</tr>
<tr>
<td>56827</td>
<td>System accounts cannot be deleted and are not displayed in the accounts list on the admin console. To see a list of system accounts go to Search&gt;Basic Attributes and select Search system accounts only.</td>
</tr>
<tr>
<td>58418</td>
<td>One step migration wizard has been removed from the administration console. Users can use the migration tools to run a migration. These tools are available from the admin console download page.</td>
</tr>
<tr>
<td>59780, 54035</td>
<td>Administrator can click on any of the text labels in the administration console to see which Zimbra attribute is associated with the field.</td>
</tr>
<tr>
<td>61467, 61425</td>
<td>In the standard client, new calendar printing options were added.</td>
</tr>
<tr>
<td>61667</td>
<td>When an item is shared, the information is automatically published. Manual publishing of shared items is no longer required.</td>
</tr>
<tr>
<td>62230</td>
<td>When using the New Account Wizard, you can search an external source directory and lists to select users to provision.</td>
</tr>
<tr>
<td>62325</td>
<td>When a domain is renamed, the dynamic groups are correctly moved to the renamed domain.</td>
</tr>
<tr>
<td>50294, 64347, 64889</td>
<td>External virtual accounts are created when users share Calendar or Briefcase items with an external user. A new defaultExternal COS has been added to Class of Service. The external virtual account is assigned to this COS. Admins can manage these accounts from the administration console.</td>
</tr>
<tr>
<td>65429</td>
<td>Additional auth options for zmmailbox and zmsoap CLIs. zmmailbox now supports sending requests to a mailbox using admin auth token.</td>
</tr>
</tbody>
</table>
End users can provision, manage and view distribution lists from their Address Book. If users have the ability to create distribution lists, the Address Book drop-down menu includes a Distribution List link.

To enable the ability to create and manage distribution lists for all users on a domain, type

```
zmprov grr domain <domainname.com> dom
<domainname.com> createDistList
```

To enable the ability to create and manage distribution lists for individual users on a domain, type

```
zmprov grr domain <domainname.com> usr
<user@domainname.com> createDistList
```

In ZCS 8.0, IPv6 is a beta release. IPv6 option can be configured during ZCS installation.

The default is to use IPv4, unless IPv6 is configured.

The expected way to change IP mode is by changing zimbraIPMode first, and then running libexec/zmiptool tool, e.g.:

```
$ zmprov ms `zmhostname` zimbraIPMode ipv4 ; libexec/zmiptool ; zmcontrol restart
$ ps aux | grep java | grep preferIPv4Stack | wc -l
3
```

```
$ zmprov ms `zmhostname` zimbraIPMode both ; libexec/zmiptool ; zmcontrol restart
$ ps aux | grep java | grep preferIPv4Stack | wc -l
0
```

Provide warning message when -l options is specified or if running the command on a non-mailbox server.

Shared items can be tagged and the tags displays in the shared users’ lists as well.

Users can set their account preferences to delegate authority to another user to send messages as if came from them (Send As) or send messages on behalf of the user. When a delegated user composes a message for the user, they select the user’s name in the From address drop-down menu.

In the advanced client, added printing options to Calendar.

ZCO. In calendar invites, the delegated user can accept or decline invitations for Calendars they manage.

Ability to configure antispam settings to bypass messages originating from internal ZWC users.

Zimlets can now make GET, POST, PUT AND DELETE HTTP requests via the proxy.
System Updates for 8.0

Network Edition supported platforms

(Bug 71339)

Platform: 64-bit is supported; 32-bit is EOL

- Red Hat Enterprise Linux 6  ACTIVE
- Red Hat Enterprise Linux 5  EOL

Operating Systems and Browsers supported with the Administration Console

(Bug 71346)

- Window 7 and Windows XP
  - Internet Explorer 9
  - Firefox 12
  - Safari 5.1.4
  - Chrome 19.0.1084.56 m

- Mac "Leopard", "Snow Leopard"
  - Firefox 12
  - Safari 5.1.4
  - Chrome 19.0.1084.52

- RHEL, Ubuntu, SUSE
  - Firefox - 3.6.17.
  - Chrome - 19.0.1084.52

Zimbra Web Client (Advanced)

- Window XP SP3, Vista and Windows 7
  - IE 8.0 and higher (IE 8 for XP, 9+ for Vista/Win7)
  - Firefox (latest stable version on 5/4)
  - Safari (latest stable version on 5/4)
  - Chrome (Latest stable version on 5/4)

- Mac OS X 10.5 "Leopard", 10.6 "Snow Leopard", 10.7 "Lion"
  - Firefox (latest stable version on 5/4)
  - Safari (latest stable version on 5/4)
  - Chrome (Latest stable version on 5/4)

- Linux (RHAT, Ubuntu, Debian, Fedora, SUSE)
  - Firefox (latest stable version on 5/4)
  - Chrome (Latest stable version on 5/4)

Zimbra Web Client (Standard)

- Window XP SP3, Vista and Windows 7
  - IE 7.0 and higher (IE 7,8 for XP, 9+ for Vista/Win7)
  - Firefox (latest stable version on 5/4)
• Safari (latest stable version on 5/4)
• Chrome (Latest stable version on 5/4)

- Mac OS X 10.5 "Leopard", 10.6 "Snow Leopard", 10.7 "Lion"
• Firefox (latest stable version on 5/4)
• Safari (latest stable version on 5/4)
• Chrome (Latest stable version on 5/4)

- Linux (RHAT, Ubuntu, Debian, Fedora, SUSE)
• Firefox (latest stable version on 5/4)
• Chrome (Latest stable version on 5/4)

**Major Issues Fixed for 8.0**

To see a list of all the changes for this release, see the Zimbra Product Portal, (http://pm.zimbra.com/pm_release.php?rel=8.0&prod=zcs)

**Major Issues Fixed for 8.0.2**

<table>
<thead>
<tr>
<th>Task ID</th>
<th>Issue Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>63357</td>
<td>Task list view fields now are updated after they are edited.</td>
</tr>
<tr>
<td>75211/</td>
<td>Fixed issues that caused Contact lists to not sync correctly.</td>
</tr>
<tr>
<td>76581/77522</td>
<td></td>
</tr>
<tr>
<td>76700</td>
<td>ZCS cluster zimlet was trying to access <code>httpOnly</code> cookie which is no longer available after release 7.2.0. This resulted in a session expired on the admin console. The Cluster zimlet has been fixed to pass the correct parameters.</td>
</tr>
<tr>
<td>73298/</td>
<td>Calendar. Issues in Calendar localized version around Reminder timer and saving appointments has been fixed.</td>
</tr>
<tr>
<td>76851/77472</td>
<td></td>
</tr>
<tr>
<td>77027</td>
<td>Install and Upgrade. The MTA restarts correctly after upgrade or install.</td>
</tr>
<tr>
<td>77070</td>
<td>PST migration. PST migration now only imports new and incremental data when <strong>Ignore previously imported items option</strong> is selected.</td>
</tr>
<tr>
<td>77836</td>
<td>When upgrading to ZCS 8.0, upgrade disables in all of the COSs Zimlets that are not in the certified core Zimlet list. If non-certified Zimlets are enabled at the account level they remain enabled after the upgrade. To disable these Zimlets, the administrator must manually disable these Zimlets on all affected accounts. For a list of the core Zimlets go to page 15.</td>
</tr>
</tbody>
</table>
78487/78939  Tags now are migrated when moving a mailbox from 7.x to 8.0.2 directly using zmmboxmove.
For mailboxes that moved from 7.x to an earlier version of 8.0, the utility provided in bug 78487 can be used.
But if users added new tags to messages or re-tagged messages after the mailbox was moved, when this utility is run these tags are removed.

78661  For new installs a, a settings was changed in the default mailboxd_java_options in localconfig key because the maximum PermGen size might be too low, leading to java.lang.OutOfMemoryError.
This setting is specified in the mailboxd_java_options local config key.
After upgrade, the value should be increased to 350m. See http://bugzilla.zimbra.com/show_bug.cgi?id=78661#c16 for a detailed example.

77597  Account migration undoes any benefit of message de-duplication of data on a server.
Once all migrations are complete a new tool zmdedup can be used to reduce disk usage caused by this.

Major Issues Fixed for 8.0.1

77389  Fixed potential database corruption issue with upgrade to OpenLDAP 2.4.33 or later.

77953  When upgrading from 8.0.0 to 8.0.1, an LDAP database reload is automatically performed.

Major Issues Fixed for 8.0

6830  Sorting by To works in the Sent folder, message view and in conversation view.

26573  Inline attachments are now included in reply/forwarded messages.

50123  The zimlets-extras folder has been removed from ZCS. Sample Zimlets are available from the Gallery.

51875  HSM jobs can be configured to be a specific batch size. The zimbraHsmBatchSize attribute can be configured either as a global setting or per server to specify the maximum number of items to move during a single HSM operation. The default value is 10000.

51990  ZWC. If out of office is on, users are prompted to turn it off when they sign in to their account.
ZCO. Outlook's Work Offline option is now fully supported.

OL2003/7: File->Work Offline
OL2010: Send/Receive ribbon-> Work Offline

Work Offline can be used in conjunction with Send/Receive Groups to control when connections are made to the server, and when syncs are done. This is useful for connections that are bandwidth/cost-sensitive.

Autocomplete matches now work correctly for Contact Groups.

zmprov. Introduced a new CLI option -r. Using this allows replacement of multi-valued attribute value. If -r is not specified, and neither +/- is provided, than the command fails.

The Zimbra user objectClass has been changed to inetOrgPerson starting with ZCS 8.0. When you provision new members starting with ZCS 8.0, the object class will be inet.OrgPerson. When you upgrade from ZCS 8.0 to 8.0.x, user data will be updated to reflect this change.

The Reading Pane displays on the right by default.

Changed the CA time period from 365d to 1825d (5 years).

Default hard coded time out for self-signed certificates is now set to five years (1825 days).

The Zimbra Assistant feature is no longer available in the Zimbra Web Client.

When you upgrade to ZCS 8.0, the value for zimbraPrefGalAutoCompleteEnabled in the default COS is changed from FALSE to TRUE.

The value for zimbraPrefGalAutoCompleteEnabled in other cos's are not changed.

The default value of zimbraPrefGalAutoCompleteEnabled in newly created COS's will be TRUE.

Now if dynamic lists are used, the default is to allow lists of up to 10,000 members. This can be controlled via the localconfig key postfix_virtual_alias_expansion_limit.

During the initial installation of ZCS, a GAL sync account is automatically created for the default domain.

Show selection checkbox for selecting email, contract, voicemail items in a list view is now disabled by default. Users will have to go to Preferences>General and select Settings to display checkboxes.

If the zimbra-mta service is installed, Swatch will use it for delivering messages. If it is not installed, Swatch will attempt to use the system sendmail binary for delivering messages.

On multi-node servers that do not have zimbra-mta installed, it is necessary to ensure that there is a system sendmail binary that is correctly configured to deliver email if admins expect swatch notifications to work.
 Created generic protocol throttle for POP3 and IMAP4 servers. The throttle will limit requests/second from a given IP and from a given account ID. The limit is enforced per-protocol; i.e. requests from POP and IMAP clients are handled separately. The limits are configurable in LC, with the following keys and default values:

- `imap_throttle_ip_limit` - default 250
- `imap_throttle_acct_limit` - default 250
- `imap_throttle_command_limit` - default 25
- `pop3_throttle_ip_limit` - default 200
- `pop3_throttle_acct_limit` - default 200

When a domain is deleted, ZCS now deletes all its alias domains (i.e. alias domains with `zimbraDomainAliasTargetId` pointing to the domain being deleted.)

On upgrade the ZCS installer automatically renames the existing admin extension `com_zimbra_smime` to `com_zimbra_smime_cert_admin` to avoid naming conflicts with the new `com_zimbra_smime` end user client Zimlet.

Implement throttle for requests from an IP for LMTP service. By default, no throttling applied because the requests mostly come from internal MTAs.

To enable, throttling for LMTP service add the hostname/IP of MTA to `zimbraThrottleSafeHosts` and set the LC key `lmtp_throttle_ip_limit`.

Auto provisioned related attributes description and usage have been documented. The text doc is in `/opt/zimbra/doc/autoprov.txt`.

Free/Busy setting now are displayed correctly on domains.

The `com_zimbra_linkedin` and `com_zimbra_social` zimlets will be undeployed and removed when you upgrade to ZCS 8.0. These zimlets are available from the Gallery at [http://gallery.zimbra.com/](http://gallery.zimbra.com/).

Customers currently on ZCS 7.x upgrading to latest version of ZCS will require full re-indexing mailboxes for sort-by recipients feature to work properly.

Without full re-indexing the mailbox, sorting by "To" field in the "Sent" folder message view will skip all the messages from the sorted results added before the upgrade.

Note: re-indexing mailbox is an expensive operation and if this feature is NOT so required then, its NOT recommended to do mailbox re-indexing.

Deployments with Firefox do not update the log until the configuration is completed in some cases.
75053 HTTPS by default for logon.
This bug is marked as WORKSFORME.

75152 LDAP based GALsync performance improvements.

75505 In 7.x and earlier releases, the server side logging controlled in log4j.properties was automatically scanned and reloaded even when the server is running.

In 8.0 it is now necessary to invoke zmprov rlog from the command line in order to cause log4j.properties to be reloaded while server is running.

76414 Index data for mailboxes is never deleted so a mailbox index can become very large over time and might be consuming excess disk space because of the large index data.

In 8.0, a new zmprov CLI, compactIndexMailbox (cim) was created to compact index data. This command can be used to reclaim disk space when the index volume starts to become full.

To compact a mailbox's index, type
zmprov cim <name@domain|id> start

Note: Depending on the size of the mailbox and the number of deletes this might take awhile. This might require additional free space on the index directory.

You can run this command concurrently. It is recommended to run this command during off peak hours. You cannot cancel the command once it is started.

To see the status of index compaction on a mailbox, type
zmprov getIndexStats <name@domain|id>

76427/74430 All non-default and non-certified Zimlets are disabled when upgrading to 8.0.

The com_zimbra_linkedin and com_zimbra_social zimlets will be undeployed and removed when you upgrade to ZCS 8.0. These zimlets are available from the Gallery at http://gallery.zimbra.com/.

Security Fixes for 8.0

ZCS release 8.0 includes security fixes.

Beta Features in ZCS 8.0

IPv6 support is beta for 8.0.

When installing ZCS, the installation menu now includes the ability to configure zimbraIPMode to either IPv4 or IPv6. (Bug 72715)

Changes to ZCS 8.0

This section documents major changes to this release of ZCS.
zimbra_posixaccount and zimbra_samba extensions are removed from ZCS installation. They will be available from the Zimbra Gallery, http://gallery.zimbra.com and be supported and maintained by the Zimbra Community. (Bug 72160)

Zimbra Desktop will EOL in a future release of Zimbra but ZD 7.2 will be supported with Zimbra 8.0. The technology choices to provide offline access to Zimbra have expanded since the release of Zimbra Desktop 1.0.

Extra and experimental Zimlets in /opt/zimbra/zimlets-experimental and opt/zimbra/zimlets-extra are removed from ZCS installation. The certified core Zimlets that ship with ZCS include the following.

<table>
<thead>
<tr>
<th>com_zimbra_phone</th>
<th>com_zimbra_url</th>
</tr>
</thead>
<tbody>
<tr>
<td>com_zimbra_email</td>
<td>com_zimbra_date</td>
</tr>
<tr>
<td>com_zimbra_ymemoticons</td>
<td>com_zimbra_dnd</td>
</tr>
<tr>
<td>com_zimbra_attachmail</td>
<td>com_zimbra_attachcontacts</td>
</tr>
<tr>
<td>com_zimbra_srchhighlighter</td>
<td>com_zimbra_webex</td>
</tr>
</tbody>
</table>

Note: When you upgrade to ZCS 8, other Zimlets that you have enabled are disabled. (Bug 50123)

Zimlets will be available from the Zimbra Gallery, http://gallery.zimbra.com. (Bug 52813)

The Social and LinkedIn Zimlets were moved to the Zimbra Gallery to be supported and maintained by the Zimbra Community.

ZCS no longer caches content when using the proxy servlet. The attribute, zimbraProxyCacheableContentTypes, is deprecated. (Bug 74769)

HTTPStoreManager is EOL in ZCS 8. ZCS 8.0 include a new StoreManager SDK for integrations with third party storage solutions.

Zimbra Instant Messaging (IM) capabilities was removed in ZCS 8.0.

Family Mailbox feature is removed in ZCS 8.0. See Known Issues, bug 77519 on page 23.

Zimbra Web Client UI Changes

- The default value to view the Mail tab content is Reading Pane on the right.
- Get Mail button is removed and refresh is now on the right end of the feature bar.
- The Print option is under the Actions menu.
- For advanced searches, click the magnifying glass in the Search field.
- People Search field was removed.
- Themes default has changed to Serenity.
- Briefcase is disabled by default.
Show selection checkbox for selecting email, contract, voicemail items in a list view is now disabled by default.

Upgrade Process

To upgrade from 6.0.x or 7.0.x to 8.0.x, download the latest ZCS 8.0.x software and run the upgrade.

Note: Database reloads are performed on 7.x to any 8.x upgrade.

Before You Upgrade

The following might need to be done before you upgrade.

Zimbra Database Integrity Check

Some customers have had corrupted databases prior to upgrade, and the upgrade has in some of those cases exacerbated the problem. In order to detect any corrupted databases as early as possible, we have added an optional step to check the MySQL database with zmdbintegrityreport prior to making any system changes. You are prompted to decide if you would like to run the zmdbintegrityreport.

The zmdbintegrityreport can take minutes to an hour to run, depending on your system size and disk bandwidth.

Note: The zmdbintegrityreport is run on a weekly basis from cron on all zimbra-store nodes. Large sites can opt to disable this by setting zmlocalconfig -e zmdbintegrityreport_disabled=TRUE. If you choose to disable this, it is recommended that the integrity reports be run by hand during the your normal maintenance windows and prior to running any ZCS upgrades.

Preparing Your OS

Before you upgrade ZCS, Zimbra recommends that the operating system is updated with the latest patches that have been tested with ZCS.

Red Hat Enterprise Linux OS

Beginning with ZCS 8.0, only Red Hat Enterprise Linux 6 (64) is supported. If you are running an earlier version of RHEL, make sure you install this OS before upgrading to ZCS 8.0.

SLES 11 OS only.

The upgrade to ZCS 8.0 will fail unless the following steps are taken before upgrading ZCS. (Bug 77112)
To /etc/profile add the following

ulimit -v unlimited
ulimit -m unlimited

**Important:** *If your OS is SUSE Linux Enterprise Server 11, we recommend you have SP2 installed.* (Bug 52031)

**Verify Certificates Expiration Date**

ZCS 8.0.x requires a valid self-signed or commercial SSL certificate for communication between some components. The self-signed certificates that are automatically created by the ZCS install have a default expiration in ZCS 7.2 or earlier of 365 days, beginning with ZCS 8.0 default expiration is 1825 days (5 years).

If you have an ZCS installation that is over one year old and are using self-signed certificates, your certificates will need to be updated either prior to the upgrade or immediately following the upgrade.

After you upgrade, the following commands run as the zimbra user will regenerate the self-signed SSL certificates:

- `sudo zmcertmgr createca -new`
- `sudo zmcertmgr deployca`
- `sudo zmcertmgr deploycrt self -new`

**ZCS**

**Important:**

**If you use Zimbra Clustering**

Zimbra Clustering is no longer available for ZCS 8.0. VMware provides integrated high availability between VMware Zimbra and VMware HA for automated recovery of critical Zimbra application services and server components in the event of an application or infrastructure failure. Third party solutions such as network load balancers, storage mirroring, or OS clustering solutions like Red Hat Cluster Suite may be used in your deployment, but are not specifically tested or certified by VMware. (Bug75821)

**Upgrade Instructions**

Go to www.zimbra.com Open Source Edition Download page for the latest version of the software.

**Important:** Even though the upgrade process does not delete accounts on the mailbox server, you should back up the mailbox server before you begin the upgrade. After you upgrade, you should back up your server again.
When you run the install script, if ZCS is already installed, you will be asked if you want to upgrade. Follow the instructions in this release note to perform the upgrade. For additional information, refer to the installation guide.

**Important:** VMware recommends that an install or upgrade session be run with a UNIX command such as “screen” to help prevent an install or upgrade session from terminating before it is completed. This is important when the upgrade includes restoring a configuration that has a large number of accounts.

Example command usage: screen ./install.sh

**Note:** You cannot revert to a previous ZCS release after you upgrade.

Single-Server Upgrade Steps

Read the release notes before you begin.

You do not need to stop the services before upgrading. The upgrade process automatically stops and starts the services as required for the upgrade.

**Process**

1. Log in as root to the Zimbra server and **cd** to the directory where the ZCS Open Source Edition 8.0 Draft archive tar file is saved (**cd** /var/tmp). Type the following commands:
   
   - `tar xzvf zcs.tgz`, to unpack the file
   - `cd [zcsversionfullname]`, to change to the correct directory
   - `./install.sh`, to begin the upgrade installation

   The upgrade script begins by checking for an existing installation.

2. The Zimbra software agreement is displayed. Read this software license agreement and type **Y**.

3. The installer checks for prerequisites. If any are missing, the upgrade stops. Next, **Do you want to verify message store database integrity (Y)** is displayed. The default is Yes. This step runs zmdbintegrityreport to verify that the MySQL database is not corrupt before upgrading to the latest ZCS.

   The zmdbintegrityreport can take minutes to an hour to run, depending on your system size and disk bandwidth. It is preferable that you run zmdbintegrityreport at the time of the ZCS upgrade. If you choose to skip this now, the zmdbintegrityreport will run during a regular scheduled interval after the upgrade is finished.

4. When **Do you wish to upgrade? [Y]** is displayed, press **Enter** to continue. The upgrade packages are unpacked.
5. The packages are listed. The installer also lists packages that are not installed. If you want to install the packages at this time, type Y; otherwise press Enter. The upgrade checks that there is enough space to perform the upgrade. If there is not enough space, the upgrade stops.

6. When The system will be modified. Continue? [N] is displayed, type Y and press Enter. The Zimbra server is stopped, and the older packages are removed. The upgrade process verifies which version of ZCS is being run and proceeds to upgrade the services, restores the existing configuration files, and restarts the server. If you have a configuration with a large number of accounts created, this can take a while.

7. If you have not set the time zone, you will be asked to set it. This sets the time zone in the default COS. The time zone that should be entered is the time zone that the majority of users in the COS will be located in.

8. When Configuration complete – press return to exit displays, press Enter. The upgrade is complete.

Multi-Server Environment Upgrade Steps

Upgrade the servers in the following order. Update each server one at a time.

- LDAP master server. The LDAP master server must be running as you upgrade the other servers.
- LDAP replicas
- MTA servers
- Proxy servers
- Mail store servers

IMPORTANT: Certificates. If self-signed certificates are used, after the LDAP master is upgraded, the self-signed certificates must be redeployed on all remaining nodes BEFORE they are upgraded. If you do not do this, the upgrade will fail. Use CLI zmcertmgr to add the certificates. As root, type

```
/opt/zimbra/bin/zmcertmgr deploycrt self
```

Process

1. Log in as root to the Zimbra server and cd to the directory where the ZCS upgrade archive tar file is saved (cd /var/tmp). Type the following commands:
   
   ```
   tar xzvf zcs.tgz, to unpack the file
   cd [zcsversionfullname], to change to the correct directory
   ./install.sh, to begin the upgrade installation
   The upgrade script begins by checking for an existing installation.
   ```

2. Three software license agreements are displayed. Read these license agreements and enter Y for each.
3. The installer checks for prerequisites. If any are missing, the upgrade stops.

4. When you upgrade the mail store server, the installer displays **Do you want to verify message store database integrity (Y)** is displayed. The default is **Yes**. This step runs `zmdbintegrityreport` to verify that the MySQL® database is not corrupt before upgrading to the latest ZCS.

Running `zmdbintegrityreport` can take minutes to an hour to run, depending on your system size and disk bandwidth. It is preferable that you run `zmdbintegrityreport` at the time of the ZCS upgrade. If you choose to skip this now, the `zmdbintegrityreport` will run during a regular scheduled interval after the upgrade is finished.

When the MySQL software versions are changed during upgrades, the underlying database tables need to be upgraded. The `zmdbintegrityreport` does this automatically during its first run and will report the changes. These are normal and should not cause alarm when upgrading.

5. When **Do you wish to upgrade? [Y]** is displayed, press `Enter` to continue. The upgrade packages are unpacked.

6. The packages you want to install on the server should be marked **Y**. All other packages should be marked **N**.

The upgrade checks that there is enough space to perform the upgrade. If there is not enough space, the upgrade stops.

7. When **The system will be modified. Continue?** is displayed, type **Y** and press `Enter`. The server is stopped and the older packages are removed. The upgrade process verifies which version of ZCS is being run and proceeds to upgrade the services, restores the existing configuration files, and restarts the system. If you have a configuration with a large number of accounts created, this can take a while.

8. When **Configuration complete – press return to exit** displays, press `Enter`. The upgrade is complete. Continue to upgrade each server.

**After the Upgrade is Complete**

After you completed the upgrade to ZCS 8.0, the following bullet items might need to be addressed.

- You should run `zmldapupgrade -b 66387` after upgrading.

  Beginning with 8.0, `zimbraAllowFromAddress` attribute cannot be set for internal accounts or distribution lists. Running this script will change `zimbraAllowFromAddress` values to grants.

  This step was not included into the installer-driven upgrade due to potentially long delay for sites that set `zimbraAllowFromAddress` on many accounts.
The migration command reports how many accounts had `zimbraAllowFromAddress` attribute set and how many of them needed migration. One way to verify all accounts got migrated is to run the command again. The total won't change, and the number migrated should be 0. (Bug 66387)

- If your self-signed SSL certificates have expired, update them. See Verify Certificates Expiration Date on page 17.
- If you have configured the following keys, you will need to replace them as described here.

The following keys are deprecated:

- `httpclient_client_connection_timeout`
- `httpclient_connmgr_connection_timeout`
- `httpclient_connmgr_idle_reaper_connection_timeout`
- `httpclient_connmgr_idle_reaper_sleep_interval`
- `httpclient_connmgr_keepalive_connections`
- `httpclient_connmgr_max_host_connections`
- `httpclient_connmgr_max_total_connections`
- `httpclient_connmgr_so_timeout`
- `httpclient_connmgr_tcp_nodelay`

and are replaced by the following keys:

- `httpclient_internal_client_connection_timeout`
- `httpclient_internal_connmgr_connection_timeout`
- `httpclient_internal_connmgr_idle_reaper_connection_timeout`
- `httpclient_internal_connmgr_idle_reaper_sleep_interval`
- `httpclient_internal_connmgr_keepalive_connections`
- `httpclient_internal_connmgr_max_host_connections`
- `httpclient_internal_connmgr_max_total_connections`
- `httpclient_internal_connmgr_so_timeout`
- `httpclient_internal_connmgr_tcp_nodelay`
- `httpclient_external_client_connection_timeout`
- `httpclient_external_connmgr_connection_timeout`
- `httpclient_external_connmgr_idle_reaper_connection_timeout`
- `httpclient_external_connmgr_idle_reaper_sleep_interval`
- `httpclient_external_connmgr_keepalive_connections`
- `httpclient_external_connmgr_max_host_connections`
- `httpclient_external_connmgr_max_total_connections`
- `httpclient_external_connmgr_so_timeout`
- `httpclient_external_connmgr_tcp_nodelay`
Updating your MySQL table

If you upgrading from 6.X to ZCS 8.0 or later, MySQL table upgrade is required after upgrading. If you do not upgrade MySQL, regular reports from zmdbintegrityreport are going to flag warnings in your MySQL table. Customers can avoid these errors in the zmdbintegrityreport output by executing /opt/zimbra/libexec/scripts/migrate20100913-Mysql51.pl. (Bug 24329, 50557)

MySQL upgrades are not automatically run during the upgrade to 8.0.x, because of the time that it takes this process to run. There is no known performance impact when running in production without doing this MySQL table upgrade.

Applying the Mysql51.pl script requires all Zimbra services except mysql.server to be stopped.

This script should be executed on all the mailstore servers where the mailboxd process is running. For a 4000 mailbox, 250 MB mailbox size, the script could take about 70 minutes to run. Customers should schedule their maintenance window accordingly.

To run the script:
1. Switch to zimbra user.
   su - zimbra
2. Stop mailboxd services to avoid email communications that might cause an interruption.
   zmmailboxdctl stop
3. Execute the perl script to upgrade the database tables.
   /opt/zimbra/libexec/scripts/migrate20100913-Mysql51.pl
4. Start the mailboxd service.
   zmmailboxdctl start

Remove Current Version and Perform Clean Install of ZCS

If you do not want to upgrade, but prefer to install ZCS Open Source Edition 8.0 Draft as a new installation, when you run the ZCS install script, enter N (no) when asked Do you wish to upgrade?

A warning displays asking if you want to delete all existing users and mail. If you enter Yes, all users, mail, and previous files are removed before proceeding with the new installation. Refer to the installation guides for installation instructions.

Status of Your Customization to ZCS after Upgrade

Upgrading to the newest release does not delete your accounts or change your configuration.
Configuration settings stored in LDAP and localconfig are preserved during upgrades. Any files installed by ZCS might be deprecated and/or overwritten during upgrades, removing any customizations. This includes customized themes, logo branding changes, and crontab changes.

Only the core Zimlets are enabled after the upgrade. Zimlets that you customized and/or deployed are preserved during the upgrade but will be disabled. As upgrading of customized Zimlets cannot be tested before the release, Zimbra recommends that you verify that your customized Zimlets work correctly before re-enabling them for your end-users after the upgrade. The core Zimlet list is on page 15.

**Note:** When upgrading to ZCS 8.0.x from a previous major ZCS version, the upgrade step disables zimlets that are not the core zimlets for ZCS in all COSs. If you have enabled other zimlets at the account level, you might need to manually disable these zimlets. (Bug 77836)

All entries between the designated comments in the Zimbra crontab file are overwritten with new defaults upon upgrade.

### Changes to Customized Themes

In ZCS 8.0, a new design for default skins was implemented. Custom skins created for Zimbra 7.x might not work as intended with Zimbra 8.x. Depending on what's in the skin, the issues might range from simple things such as colors being used in the wrong places to larger issues like functional components being hidden or placed in inaccessible areas of the screen. The proper fix for this is to take an existing 8.x skin, duplicate it, and update the skin to meet the same needs as the old skin. (Bug 62523)

### Known Issues

Zimbra engineering has identified a number of issues with the software, and we are actively working to resolve them. Following are the issues that are most likely to occur. All known bugs are listed in Zimbra’s Bugzilla database, available on the Zimbra web site, at [www.zimbra.com](http://www.zimbra.com).

#### Known Issues for 8.0

<table>
<thead>
<tr>
<th>Issue #</th>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>79212</td>
<td>Upgrading to ZCS 8.0.2 could take over one second per domain.</td>
</tr>
<tr>
<td>77519</td>
<td>If you are using family accounts, wait for 8.0.2 to upgrade, unless you feel confident enough to manually fix your LDAP data. Note that family accounts are not supported in ZCS 8.0, and the upgrade or workaround will make the former “child” accounts a normal account. See bug 77519, Comment 24 for the workaround steps and a sample shell script. (<a href="http://bugzilla.zimbra.com/">http://bugzilla.zimbra.com/</a>)</td>
</tr>
<tr>
<td>Bug ID</td>
<td>Description</td>
</tr>
<tr>
<td>------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>78046</td>
<td>Rolling Upgrades. It is not possible to rename accounts when the LDAP servers are running 8.x and the mail store are still on 7.x without special workarounds as noted in the bug, comment 14. Bugzilla, (<a href="http://bugzilla.zimbra.com/">http://bugzilla.zimbra.com/</a>)</td>
</tr>
<tr>
<td>75254</td>
<td>Rolling Upgrades. Multinode configuration with self-signed certificates will not function in a rolling upgrade. If self-signed certificates are used, after the LDAP master is upgraded, the self-signed certificates must be redeployed on all remaining nodes before they are upgraded or the upgrade will fail. Workaround: Use commercial certificates with rolling upgrades.</td>
</tr>
<tr>
<td>75280</td>
<td>When using the new quick reply feature to reply to a message, the original message is not added as an attachment, even if the user's preferences are set to include the original message. This is the correct behavior.</td>
</tr>
<tr>
<td>74941/75474</td>
<td>Wont fix. Users on a mailbox server at 7.2.x cannot send a message “on-behalf-of” or “send as” for a user that is on a server upgraded to 8.0.x. Make sure all users sending mail on behalf of (OBO) are on ZCS 8.0.</td>
</tr>
<tr>
<td>75386</td>
<td>Won’t Fix. LinkedIn and Twitter Search Zimlets do not work for ZCS 8.0.</td>
</tr>
<tr>
<td>75459/75527</td>
<td>Rolling Upgrades. While in rolling upgrade mode, cross version sharing does not work. Users on ZCS 7.x cannot access shares on ZCS 8.0.</td>
</tr>
</tbody>
</table>
| 75553      | Rolling Upgrade. While in rolling upgrade mode, cross mailbox search will not work for 7.2 or 8.0 versions from the admin console. Workaround: While in rolling upgrade mode, use the command line search across accounts. 
/\opt/\zimbra/\bin/\zmboxsearch -m "**" -q "test" |
| 50272      | Harmless errors are reported by the zmdbintegrityreport.                                                                                                                             |
| 76803      | Proxy does not honor zmbracoReverseProxyMailMode. You must manually restart the server with zmcontrol restart.                                                                      |
| 75523      | Rolling Upgrade: Address Book. While in rolling upgrade mode, contact Group members are not displayed when users on a 7.2 mailbox server share their address book with users on an 8.0.x mailbox server. |
| 77112      | SLES 11 OS only. The upgrade to ZCS 8.0 will fail unless the following steps are taken before upgrading ZCS. To /etc/profile add the following 
ulimit -v unlimited 
ulimit -m unlimited |
<p>| 77310      | Deleting and then recreating the GAL sync account can lead to inconsistent data for all clients. Those clients must resync the GAL.                                                        |
| 73209      | Rolling Upgrade. The preauth failed request does not lockout the account with lockout setting. This works correctly when the mailbox server is upgraded.                               |</p>
<table>
<thead>
<tr>
<th>Ticket</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>74851</td>
<td>Rolling Upgrade. You cannot move an account from a later version of ZCS to an earlier version. For example, an account on a server at ZCS 8.0 cannot be moved to a ZCS server at 7.2.</td>
</tr>
<tr>
<td>74854</td>
<td>Rolling Upgrade. If a calendar resource is renamed while you are performing a rolling upgrade make sure the rename requests are sent to the LDAP server that has been upgraded to 8.0.x.</td>
</tr>
<tr>
<td>78321</td>
<td>Rolling Upgrade. While in rolling upgrade mode, admins should deploy the drag and drop zimlet for 7.x users during a rolling upgrade, as this zimlet is no longer utilized in Zimbra 8.0.x as functionality has moved into core product code.</td>
</tr>
<tr>
<td>78334</td>
<td>Rolling Upgrade. In Zimbra 8.0.x checklists are defaulted to off. If the behavior for users in ZCS 7.2 was to have the check list feature enabled, admins will need to change the COS settings or users can modify their preferences to maintain the same behavior.</td>
</tr>
<tr>
<td>78339</td>
<td>Rolling Upgrade. Even if the emoticons zimlet was enabled for accounts at 7.2.x, after the rolling upgrade this zimlet is not available in the user’s Preferences page. Admins should redeploy the zimlet. The zimlet zip file is in the /opt/zimbra/zimlets directory.</td>
</tr>
<tr>
<td>78430</td>
<td>Rolling Upgrade. When accounts are in a split 7.2 / 8.0 environment, after performing a mailbox move the existing proxy connection is for the original mailbox server. Active sync connections are not passed from 7.2 to 8.0 server. Users cannot use their device until either the account data on the proxy times out or flushed. Workaround: Remove the firewall/block for memcached port 11211 for all mailbox servers along with proxy server (in-case it is blocked). Mailboxmove will do an auto purge of routes after the move.</td>
</tr>
<tr>
<td>78755</td>
<td>Rolling Upgrade. The distribution list attribute name is different for users on ZCS 7.2.x and users on ZCS 8.0.x. If the GAL sync account still resides on a 7.2.1 or earlier server, it is necessary to set <code>zimbraGalLdapGroupHandlerClass</code> to <code>com.zimbra.cs.gal.ADGalGroupHandler</code>. This attribute can be set at the domain or global config level unless separate GAL sync accounts are created on the new 8.0 servers. In that case, it is necessary to set this on each GAL datasource. Once the GAL sync account is moved to an 8.0 server the attribute should be changed back to <code>com.zimbra.cs.account.grouphandler.ADGroupHandler</code>.</td>
</tr>
<tr>
<td>78826</td>
<td>Tag color is not available when viewing ZWC on Internet Explorer 10. Internet Explorer 9 and 10 need to have IE Compatibility View turned off for ZCS 8.0.x. See <a href="http://windows.microsoft.com/en-US/windows7/How-to-use-Compatibility-View-in-Internet-Explorer-9">http://windows.microsoft.com/en-US/windows7/How-to-use-Compatibility-View-in-Internet-Explorer-9</a>.</td>
</tr>
<tr>
<td>78835</td>
<td>Outlook 2013 Active Sync is not supported for ZCS 8.0.</td>
</tr>
</tbody>
</table>
For new installs, a setting was changed in the default mailboxd_java_options in localconfig key because the maximum PermGen size might be too low, leading to java.lang.OutOfMemoryError. (bug 78661)
This setting is specified in the mailboxd_java_options local config key. After upgrade, the value should be increased to 350m. See http://bugzilla.zimbra.com/show_bug.cgi?id=78661#c16 for a detailed example.

Briefcase. Images in a document file that have been linked to do not display.

Briefcase display does not display images in HTML preview.

Previous General Known Issues

<table>
<thead>
<tr>
<th>Issue #</th>
<th>Summary</th>
</tr>
</thead>
</table>
| 79204   | Known third-party browser issues
Some browser issues can affect how the Zimbra administration console and Zimbra Web Client work.
When you get a browser error, try reloading the browser to continue.
• If you use the Firefox browser, the cursor position may not be visible in the text boxes, and you have no visual feedback to continue to enter text. Even though you cannot see the cursor, type in the boxes as normal.
• If mail is displayed in HTML format, you cannot select the text with the mouse.

</table>
Product Documentation

Online help and ZCS documents are available on the administration console. Documentation can also be found on the Zimbra web site, and the Zimbra wiki has articles that the support team and the community have written in response to troubleshooting and administration issues.

Bug Reporting

If you encounter problems with this software, go to http://bugzilla.zimbra.com to submit a bug report. Make sure to provide enough detail so that the bug can be easily duplicated. Also, to discuss issues and this software in general, please visit our community forums at http://www.zimbra.com/forums.
